Profit and loss 7.3. Productivity, efficiency, profitability 7.4. Differences in performance measurement between companies and other organizations 8. Investments 8.1. Types of investments 8.2. Investment valuation methods				

Management

Course level	BACHELOR				
Course code	195157				
ECTS credits	6				
	Lectures 45	Seminar 15	Tutorial 15	Other type of learning -	Individual work 105
Teaching Staff	Vlado Dimovski (vlado.dimovski@ef.uni-lj.si) Sandra Penger (sandra.penger@ef.uni-lj.si) Judita Peterlin (judita.peterlin@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	This course is designed to familiarize the student with the basic functions of management (<i>planning, organizing, leading, controlling</i>). Additional selected topics of interest to managers will also be examined. The purpose of this course is to understand the theory and process of management as applied to a variety of settings within organizations and with relation to the environment of the 21st century. Management entails the coordination of tasks for the achievement of set objectives and is defined as the creative solving of problems, which occur in the planning, organizing, leading and controlling of resources.				
Intended learning outcomes	The course is designed to cover four fundamental managerial functions covering planning, organizing, leadership and controlling issues of modern learning organization. A basic premise of this course is that while analytical skills and tools are necessary for managers to take decisions in complex, and uncertain situations, a broad spectrum of other managerial skills is needed to get these decisions accepted, implemented and controlled.				
Content (Syllabus outline)	1. Fundamentals of management 2. Planning function 3. Organizing function 4. Leading function 5. Controlling function 6. Case studies of organizations in practice 7. Role-modelling and trends recognition and trend-setting in contemporary management practice				

Marketing Channels

Course level	BACHELOR				
Course code	195901				
ECTS credits	6				
	Lectures 36	Seminar -	Tutorial -	Other type of learning 39	Individual work 105
Teaching Staff	Tanja Dmitrović (tanja.dmitrovic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	The student will understand the elements of market channel operations and management. The student will learn the methods and techniques which enable recognizing and satisfying the needs of the customers regarding service outputs. The student will understand relationships between channel members. The student will be able to conduct marketing research for the purpose of channel planning, organizing and managing.				
Intended learning outcomes	The student will gain insight into types of relationships between marketing channel members. He/she will understand channel management strategies and methods for recognizing and understanding customer needs regarding channel service outputs. The student will get acquainted with analytical methods and techniques for segmentation and channel performance which will enable him/her to evaluate the efficiency and effectiveness of the existing channel structure and design optimal channel structure. Through project work, homework assignments, and case study analyses, the student will be able to critically evaluate the applicability of theoretical framework to business practices of various Slovenian companies. Through the guest speaker presentations, he/she will get familiar with business strategies employed by these companies in international markets. He/she will be able to apply the knowledge and skills gained at the core courses and/or methodology courses to the area of marketing channel management. Business project and other assignments are based on team work. The teams are expected to collect relevant data (using various marketing research techniques), analyze the data (using appropriate methods and techniques) and suggest business strategies. Through the coursework, the students get acquainted with the actual business problems/situations and develop critical thinking and analytical abilities and skills. He/she also develops the writing and presentational skills.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Channel design 2. Segmentation for marketing channel design: service outputs 3. Supply-side channel analysis 4. Gap analysis 5. Channel power 6. Channel conflicts and coordination 7. Channel implementation 8. Retailing, E-channels and franchising 9. Wholesaling, logistics and supply chain management 10. Vertical integration and strategic alliances 11. Legal constraints on marketing channel policies 				

Marketing Communications

Course level	BACHELOR				
Course code	195198				
ECTS credits	6				
	Lectures 36	Seminar -	Tutorial -	Other type of learning 39	Individual work 105
Teaching Staff	Vesna Žabkar (vesna.zabkar@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To provide the basic skills needed to manage and implement marketing communication to advertisers, brand managers and account managers in advertising agencies. Develop ability to plan and design integrated marketing communication strategies and assessing the effectiveness / efficiency of their implementation. Conduct the students through the preparation of an integrated marketing-communications plan.				
Intended learning outcomes	Students gain an understanding of integrated marketing communication process and learn about the elements of a communication network. The student is expected to know and understand the basic concepts in the field of advertising, sales promotion, public relations, personal selling, marketing communications at inter-organizational and international markets and assessing the effectiveness and efficiency of marketing communications. Student learns to prepare integrated marketing communications plan for a specific brand. In this context, an analysis of the situation, analysis of the target audience, setting of communication objectives, formulation of ideas, plans for implementation of various marketing communication tools, and assessment of effectiveness / efficiency of communications take place. Student is capable of based on an understanding of theory and experience with the preparation of integrated marketing communications plan to critically evaluate consistency between the theoretical principles and practical activities. Application of domestic and foreign literature, collecting and interpreting data, working in teams and reporting (oral and written).				
Content <i>(Syllabus outline)</i>	<ol style="list-style-type: none"> 1. Introduction to marketing communications 2. Marketing communications process and how communication works 3. Marketing communications planning (TG, objectives, budgets) 4. Creative strategies and creativity 5. Media strategies and media planning 6. Digital media 7. Public relations and corporate communications 8. Sales promotions (brand activation) 9. Advertising effectiveness 10. Marketing communication regulation, self-regulation and ethics 11. Presentation of projects 				

Mathematics for Business and Economics

Course level	BACHELOR				
Course code	195154				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	15	15	-	105
Teaching Staff	Damjana Kokol Bukovšek (damjana.kokol.bukovsek@ef.uni-lj.si) Liljana Ferbar Tratar (liljana.ferbar@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To develop logical thinking. To give to the student the basic mathematical notions, needed to discuss economic and business problems from the quantitative point of view.				
Intended learning outcomes	The student gets acquainted with the basics of mathematical analysis and algebra, necessary for the use and development of quantitative methods in business and economics. He or she gets to know the significance of mathematical formulation and of a mathematical model of an economic problem. The student will be capable of following economic literature of a moderate level of difficulty.				
Content <i>(Syllabus outline)</i>	1. Functions of one variable 1.1. Function, function composition, inverse function 1.2. Linear function 1.3. Polynomials, rational functions 1.4. Exponential function, logarithm 1.5. Continuity and limit 2. Derivative and applications 2.1. Derivative and differential 2.2. Taylor's series 2.3. Analysis of a function 2.4. Applications in economics 3. Functions of two variables 3.1. Partial derivatives and differential 3.2. Unconstrained extrema 4. Indefinite and definite integral 5. Mathematics of finance 6. Linear algebra 6.1. Matrices 6.2. Determinants 6.3. Systems of linear equations 6.4. Input-output models 7. Probability calculus 7.1. Combinatorics 7.2. Event algebra 7.3. Probability, conditional probability 7.3. Bernoulli trials sequence 7.5. Discrete random variables 7.6. Continuous random variables 7.7. Moments				

Microeconomics 1

Course level	BACHELOR
Course code	195155
ECTS credits	6
	<div>Lectures</div> <div>45</div> <div>Seminar</div> <div>-</div> <div>Tutorial</div> <div>30</div> <div>Other type of learning</div> <div>-</div> <div>Individual work</div> <div>105</div>
Teaching Staff	Polona Domadenik (polona.domadenik@ef.uni-lj.si) Matjaž Koman (matjaz.koman@ef.uni-lj.si) Tjaša Redek (tjasa.redek@ef.uni-lj.si)
Prerequisites	–
Course objectives and competences	<p>The course acquaints students with basic economic problems and ways of solving them. The course presents in detail the theory of demand, production and costs, the operation of the market mechanism and the theory of distribution. The course gives the student a basic analytic and categorical apparatus needed for this and subsequent economic subjects. The course provides also the institutional framework and presents organizational and ownership forms of enterprises and the environment in which businesses operate and is influenced by state regulation.</p>
Intended learning outcomes	<p>Students will get equipped with the basic microeconomic laws. They will be able to apply supply and demand mechanisms to study real word problems. They will gain understanding in the laws of consumer behavior and the theory of production and costs. On this basis, the student will be able to understand the behavior of firms and individuals in different market structures (output and factors markets) and how these markets are interconnected. Acquired knowledge will be used by the students in further economics and business subjects. Practical examples that constitute an important part of the course and allow students to implement theoretical concepts in real world applications, will be studied in seminar sessions. Based on acquired knowledge the student will be able to understand and analyze the current developments in the economy and analyze the economic policy measures. Designed methodological work within the course (especially in seminar and exercise sessions) will teach students how to analyze economic problems with the help of basic mathematical skills. Students will develop the skills and competences of identifying the problem, analyzing and interpreting the results. In the fulfillment of the set tasks and obligations of the student develops the skills of analytic thinking and creative team work.</p>
Content <i>(Syllabus outline)</i>	<ol style="list-style-type: none"> 1. Introduction 2. Theory of demand and supply 3. The theory of individual behavior 4. Individual and market demand 5. Production 6. Costs 7. Perfect competition 8. The firm in the economic theory 9. Monopoly 10. Monopolistically competitive markets, oligopoly and cartel 11. Labor markets 12. Capital markets and land markets

Operations Management

Course level	BACHELOR				
Course code	195164				
ECTS credits	6				
	Lectures 30	Seminar -	Tutorial 30	Other type of learning 15	Individual work 105
Teaching Staff	Borut Rusjan (borut.rusjan@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To acquaint students with the role of operations business function for efficient and effective performance of an organization. Students will gain an insight into the management of operations process as a transformational process and into the strategic role of operations. To present basic decisions within operations business function and to give an overview of methods, approaches, techniques and concepts used for effective organizing, planning and control of operations and assure their understanding.				
Intended learning outcomes	Student acquires knowledge about basic decisions that have to be taken in order to effectively manage operations. Student understands concepts, approaches, methods, and techniques which enable decision making about operations. Student is trained to identify basic problems within operations and to develop alternative solutions to these problems. Based on understanding of the strategic role of operations, a student can contribute to competitiveness of an organization. Student acquires skills related to use of domestic and foreign literature and skills related to use of the procedure of process analysis, capacity planning and inventory management.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Introduction to operations management 2. Strategic role of operations 3. Layout of facilities 4. Operations planning and control system 5. Forecasting 6. Facilities decisions 7. Aggregate planning 8. Master production scheduling 9. Independent demand inventory 10. Materials requirements planning 11. Shop floor scheduling and control 12. Managing quality 				

Principles of Consumer Behavior

Course level	BACHELOR				
Course code	195915				
ECTS credits	6				
	Lectures 36	Seminar -	Tutorial -	Other type of learning 39	Individual work 105
Teaching Staff	Irena Vida (irena.vida@ef.uni-lj.si) Mateja Kos Koklič (mateja.kos@ef.uni-lj.si)				
Prerequisites	Students are required to have solid knowledge in general marketing obtained in courses like Introduction to Marketing.				
Course objectives and competences	<ul style="list-style-type: none"> - Develop interdisciplinary knowledge of consumer behavior from the vantage point of marketing organizations and end consumers. - Obtain an understanding of basic theoretical terminology and concepts as well as research insights for solving marketing challenges in dynamic business environments. - Develop competence for team work, analytical, critical and creative thinking in applying theoretical and empirical insights for the purpose of business decision-making. - Upgrade the knowledge gained from the Principles of marketing course and prepare the students for future study of strategic marketing. 				
Intended learning outcomes	Gaining knowledge and understanding of consumer behavior. New knowledge pertains to the understanding of basic terms and concepts, theories and models of consumer behavior with the emphasis on understanding consumer decision-making and its determinants. Practical application of theoretical insights helps breach the gap between knowledge of consumer behavior and formulation of marketing strategy. Searching to establish the connection to praxis via homework assignments and projects, so as to gain a comprehensive understanding of consumer behavior and its determinants.				
Content (Syllabus outline)	1. The consumer: key to market success 2. Consumers as individuals 2.1 Perception 2.2 Learning and memory 2.3 Motivation, values and involvement 2.4 Attitudes 2.5 Personality and Self-concept 3. Buyers as decision makers 3.1 Classical Models of Individual Decision Making 3.2 Decision Making Process and New Product Adoption 3.3 Household Decision Making 3.4 Organizational Decision Making 4. External influences in consumer behavior 4.1 consumers and culture 4.2. Social and Economic Determinants: Subcultures and Social Class 4.3 Interpersonal Influences, Reference Groups and Word of Mouth 4.4. Consumer Lifestyles 5. Consumer behavior, marketing and society 5.1. Applications to Profit and not for Profit Marketing 5.2. Public Policy and Consumer Protection				

Principles of Marketing

Course level	BACHELOR				
Course code	195167				
ECTS credits	6				
	Lectures 30	Seminar 15	Tutorial 15	Other type of learning 15	Individual work 105
Teaching Staff	Maja Konečnik Ruzzier (maja.konecnik@ef.uni-lj.si) Tomaž Kolar (tomaz.kolar@ef.uni-lj.si) Barbara Culiberg (barbara.culiberg@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To develop basic knowledge about marketing as a business concept and as an activity in the company. To impart the feeling what is a market-oriented company which aims to fulfil customer expectations better than the competitors. To develop competences for integration of marketing elements into a harmonious integrity. To impart to students the need for careful monitoring of competitive business environment and for own positive attitude toward changes. To accustom students to a team work and to the application of the acquired knowledge for concrete problem solving.				
Intended learning outcomes	A student acquires basic knowledge about marketing as a business concept and as an activity in the company so that she/he can thoroughly understand, integrate, evaluate, and use them in practice. The application of knowledge acquired based on theory and practical examples for a definition and analysis of critical phenomena in the field of marketing in the company. Based on the acquired knowledge, a student will be able to integrate marketing elements into a harmonious integrity. The knowledge, acquired with the course study, enables the student not only to understand the key extensiveness and questions regarding the development and planning of marketing in the company, but also to critically assess theoretical contributions and practice of marketing in Slovenia and abroad. A student will develop skills for analytical thinking and for problem identification and solving based on case studies, she/he will become familiar (oral and written) about her/his findings and decisions; she/he will develop capabilities for an efficient team work.				
Content (Syllabus outline)	1. Marketing in the modern firm and main marketing concepts 2. Customer value, satisfaction and loyalty 3. Strategic marketing process and plan 4. Challenges and adaptations of marketing in the 21st century 5. The marketing environment 6. The marketing research 7. Forecasting and measuring demand 8. Consumer behavior 9. Target marketing - segmentation, targeting and positioning 10. Product, service and other entities 11. Product/entity life cycle and development of new products/entities 12. Brands 13. Price 14. Marketing channels 15. Marketing communications: advertising, sales promotion, public relations 16. Marketing communications: personal selling, direct marketing, word of mouth marketing, interactive marketing				

Programming

Course code	195905				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	36	-	-	39	105
Teaching Staff	Talib Damij (talib.damij@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<ul style="list-style-type: none"> - Developing simple programs using Python programming language. - Learning about how to access database from the program. - Learning GUI programming - Learning about Object-oriented programming 				
Intended learning outcomes	<p>In this course students learn about the basic concepts of programming using programming language Python. Students learn how to develop simple programs using Visual Studio Code. In addition, students are going to develop simple software applications using Python, tkinter GUI and a database. The intended outcome of the course is to prepare students to become beginners-programmers.</p>				
Content <i>(Syllabus outline)</i>	<ol style="list-style-type: none"> 1. Object-oriented programming 2. Programming language Python <ol style="list-style-type: none"> 2.1. Variables 2.2. Decisions 2.3. Lists 2.4. loops 3. GUI programming 4. Database access 5. Classes-objects 				

Societal Marketing

Course level	BACHELOR				
Course code					
ECTS credits	6				
	Lectures 36	Seminar -	Tutorial -	Other type of learning 39	Individual work 105
Teaching Staff	Barbara Culiberg (barbara.culiberg@ef.uni-lj.si)				
Prerequisites	Basic knowledge of marketing.				
Course objectives and competences	Developing basic competences necessary for application and adaptation of marketing tools to solving social problems. Competence in addressing the difficulties in applying marketing to social problems. Competence of socially responsible thinking and action. Mastery of three areas of societal marketing: socially responsible marketing, marketing in nonprofit organizations and societal marketing.				
Intended learning outcomes	Extended knowledge of marketing principles relevant to the intersection of state, market and nonprofit sector. Understanding the complexities and difficulties in adopting marketing to the social sphere. Socially critical view of marketing. Outline and connection of socially responsible marketing, marketing in nonprofit organizations and societal marketing.				
Content (<i>Syllabus outline</i>)	The course brings together societal marketing topics such as socially responsible marketing, nonprofit marketing and social marketing. The students gain insights into the social role of marketing and acquire know-how related to the use of marketing in solving social problems.				

Socio-Economic Development and Contemporary Slovenia

Course level	BACHELOR				
Course code	195191				
ECTS credits	6				
	Lectures 36	Seminar -	Tutorial -	Other type of learning 39	Individual work 105
Teaching Staff	Rok Spruk (rok.spruk@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	The course informs the students about the economic and political history of Slovenia and its longrun economic and institutional development in the comparative perspective using data-driven techniques to understand the patterns of long-run development. The acquired knowledge enables the student to understand better the present political, economic position of Slovenia in modern Europe and the rest of the world in a comparative and rigorous perspective. It also offers the historical and contemporary survey of Slovenia's economic growth and both formal and informal institutional framework.				
Intended learning outcomes	The student can use the acquired knowledge for the further study and better understanding of the present political, economic and cultural position of Slovenia in the contemporary Europe. It is the basis for better understanding and analysis of the current developments in Slovenia and its economic and political position in Europe. In the same way, the student can better analyse the historical aspect of the present local, regional, and national business practice.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Comparative case studies in economic history and long-run development 2. The use of comparative case studies to understand the impact of institutional changes on economic development 3. Institutional integration and economic growth 4. The long shadow of history on economic development 5. Democracy and economic growth: friends or foes? 6. Long-term effects of the partition of Trieste after World War 2 7. Two centuries of institutional instability and long-term economic development 8. Institutional collapses, Yugoslav war and Slovenia's economic growth in post-independence period 9. Can good policies overcome weak institutions? 10. Is culture more important than institutions for long-term economic development? 11. Why is Slovenia not as rich as Switzerland and Australia? 				

Statistical Analysis

Course level	BACHELOR				
Course code	195166				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	15	15	-	105
Teaching Staff	Marko Pahor (marko.pahor@ef.uni-lj.si) Jože Rován (joze.rovan@ef.uni-lj.si) Simona Korenjak Černe (simona.cerne@ef.uni-lj.si)				
Prerequisites	Knowledge of basic statistics (organizing data, descriptive measures, basic probability).				
Course objectives and competences	Upgrade basic statistical knowledge and develop skills and ability for inference statistical approaches (confidence intervals, hypothesis tests, ANOVA, regression and correlation analysis, introduction to time series analysis).				
Intended learning outcomes	Develop skills and ability to prepare data, select proper quantitative statistical method and interpret the results for analyzing economic and business problems. Develop the ability of critical thinking based on obtained results of the statistical tests.				
Content (<i>Syllabus outline</i>)	1. Data sources and data collection 2. Survey methods 3. Descriptive statistics 4. Probability and discrete distributions 5. Normal distributions and Sampling distributions 6. Confidence intervals 7. Testing hypotheses about a population 8. Testing differences in means and variances 9. Analysis of variance 10. Chi-square test 11. Correlation and simple linear regression 12. Multiple regression 13. Regression model building 14. Time series				

Strategic Management 1

Course level	BACHELOR				
Course code	195196				
ECTS credits	6				
	Lectures 30	Seminar 15	Tutorial 15	Other type of learning 15	Individual work 105
Teaching Staff	Adriana Rejc Buhovac (adriana.rejc.buhovac@ef.uni-lj.si) Tomaž Čater (tomaz.cater@ef.uni-lj.si) Matej Lahovnik (matej.lahovnik@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To provide students with the knowledge about the process of strategic management and teach them to link the knowledge acquired from different functional courses which enables them to better understand the linkages among different organizational levels and functional fields in a company. To teach students how to use and critically evaluate the literature in the field of strategic management, link the acquired knowledge with current practical problems and enable them for further professional and research work in the field of strategic management. To help students actually understand the discussed theoretical concepts, methodological tools and practical examples, so that they can better implement them in practice and become, with some additional work experience, experts in the field of strategic management.				
Intended learning outcomes	Students will have knowledge on theoretical concepts and practical examples, related to strategic management. This knowledge will enable students to understand the discussed topics and use them in practice in an innovative way. They will be able to compare theoretical concepts of strategic management with practical findings in the field and, based on this comparison, critically evaluate both theory and practice. Students will possess adequate methodological knowledge for further research in the field of strategic management. They will be able to use basic information technology and didactical equipment, critically collect and use domestic and foreign literature, collect, interpret and analyze data, which will enable them to solve actual problems, and provide oral and written reports on their work and proposed solutions.				
Content (Syllabus outline)	1. Introduction to strategic management 2. Analysis of a company's general and industry environment 3. Analysis of a company's resources, capabilities and knowledge 4. Forecasting in a company 5. Holistic (comprehensive) analysis 6. Mission, vision and strategic objectives 7. Corporate strategies 8. Business strategies 9. Functional strategies 10. Strategy evaluation and choice 11. Strategy implementation 12. Strategic control 13. Organization of strategic management				

The Law of Business Organisations and Business Law

Course level	BACHELOR				
Course code	195156				
ECTS credits	6				
	Lectures 45	Seminar 15	Tutorial 15	Other type of learning -	Individual work 105
Teaching Staff	Branko Korže (branko.korze@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	The course acquaints students with the design of the national legal order and the legal order of the European Union, fundamental institutions of corporate law, and basic status of companies and other legal entities. In the context of corporate law, the students learn about the basics of the registry law, workers' participation in management of companies with the basics and fundamentals of intellectual property and insolvency law. The business part of the course is to know the students with the fundamental institutions of property law and contract law is based, upgraded two most common types of contracts, namely sales agreement and work contract. Another objective is to know students basics of securities and the advantages and disadvantages of alternative forms of resolving commercial disputes.				
Intended learning outcomes	Students in the course of master basic knowledge of subject, allowing them to support the successful understanding of economics and business studies.				
Content (Syllabus outline)	1. Introduction to the legal system EU 2. Arbitration and alternative dispute resolution (ADR) 3. Company law 3.1. The Company Law Directives 3.2. The General Partnership, Limited Partnership and Silent Partnership 3.3. Close Corporations and Public Corporation 3.4. Group of Companies 3.5. Economic interest grouping; European economic interest grouping 3.6. Bankruptcy and Corporate Insolvency 3.7. Current Trends and future possibilities in Company law of the EU and USA 4. Intellectual Property Rights 4.1. Industrial property 4.2. Patents 4.3. Trademarks and brand names 4.4. Design 4.5. Semiconductor Chip 4.6. Copyright 4.7. Competition Law of EC 5. Introduction to the Law of Obligation 5.1. The Essentials of a Contract 5.2. Rights to Real-estate property rights 5.3. The Essentials of Contracts: Offer and Acceptance, Consideration and the Intention to create Legal Relations 6. Contracts for the Sale of Goods 6.1. Incoterms 2000 6.2. The remedies of the seller and the buyer 6.3. Rights of the unpaid Seller against the Goods and Actions for breach of the Contract 7. Consumer protection 8. Commercial paper 8.1. Biles of exchange				

- 8.2. Checks
- 8.3. Shares
- 8.4. Bill of Lading
- 8.5. Warehouse receipts
- 8.6. Payment and the liabilities of the parties

Tourism Management

Course level	BACHELOR				
Course code	195214				
ECTS credits	6				
	Lectures 36	Seminar -	Tutorial -	Other type of learning 39	Individual work 105
Teaching Staff	Kir Kuščer (kir.kuscer@ef.uni-lj.si)				
Prerequisites	Basic knowledge in the field of tourism and management.				
Course objectives and competences	The objectives of the course are: to understand the importance of management in the tourism sector; to familiarize students with the basic functions of management; to understand the basic principles of management in tourism; experience management in various companies and organizations in the tourism sector; to understand the development of tourism in the future and new trends in tourism management.				
Intended learning outcomes	For understanding of the subject students need a previous knowledge in tourism field. The gain knowledge can be used in practice at the level of low, medium or higher management in tourism sector. The students will gain knowledge and be able to understand actual and up-to-date questions in the field of tourism management. After the course students will be able to understand: tourism sector, competitiveness of tourism company or destination and mega trends in tourism industry.				
Content <i>(Syllabus outline)</i>	1. Management and its role in tourism 1.1 Management – definitions of basic concepts 1.2 Decision-making – processes and types of decisions 1.3 Governance and management – performance and public responsibility 2. Management of the various providers in the tourism sector 2.1 Transport 2.2. Accommodation and catering 2.3 Tour operators and tourist agencies 2.4 Tourist attractions 2.5. Public sector – tourist destinations; 3. The future of tourism management 3.1. Mega-trends in tourism – the situation in the tourism sector by 2020 3.2. New trends in the field of management in tourism 4. Examples from practice (illustrative) 4.1. Air carriers: the case of Adria Airways 4.2 Accommodation and catering: the case of Sava Tourism, d.d. 4.3 Tour operators: the case of Kompas d.d. 4.4 Tourist attractions: the case of Postojna Cave 4.5. Tourist destination: the case of Slovenia 4.6 International examples of success and failure of tourism businesses				

BACHELOR COURSES in SPRING semester

Electronic Business

Course level	BACHELOR				
Course code	195175				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	15	15	15	105
Teaching Staff	Aleš Groznik (ales.groznik@ef.uni-lj.si) Peter Trkman (peter.trkman@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Students should acquire competencies to the basics of electronic commerce, setting up e-business strategy, moving from network marketing to e-marketing, transformation and building e-business. The course addresses issues concerning the design of e-business strategy in the company, direct links with suppliers in its supply chain, changes in the nature of products and services in conjunction with digital and interactive services.				
Intended learning outcomes	Understanding the differences between existing and new way of doing business or transition to electronic commerce. Understanding strategic positions in the renovation of electronic commerce, new business models, business process reengineering and computerization of operations. Develop and introduce a model of electronic commerce and information processes to the concepts of ERP, SCM, CRM, PLM. Examples are discussed in the context of theoretical lectures and exercises. Use the skills of literature and other sources, collecting and interpreting data, using ICT and other teaching materials, reporting (oral and written), identification and problem solving, critical analysis, synthesis, writing, thinking to read literature, teamwork, social skills. Preparation of group tasks require teamwork in collecting and analyzing literature, the Internet and related information tools. Presentation of the task requires skill and a presentation before an audience of professors and other students.				
Content <i>(Syllabus outline)</i>	<ol style="list-style-type: none"> 1. Running business in the information era 2. E-business models: B2B, B2C, virtual organizations 3. E-strategy: Supply Chain Management, Customer Relation Management, Product Lifecycle Management 4. Standards in e-business and IS support 5. Mobile business 6. Legal and ethical aspects of E-business 7. E-government 				

Entrepreneurship

Course level	BACHELOR				
Course code	195169				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	15	15	15	105
Teaching Staff	Boštjan Antončič (bostjan.antoncic@ef.uni-lj.si) Patricia Kotnik (patricia.kotnik@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<p>The class is an introduction to and overview of entrepreneurship. The key course objective is to familiarize the student with the essential requirements for the successful planning of a new venture and the issues involved in managing a new venture:</p> <ul style="list-style-type: none"> - Overview of basic concepts and facts connected to entrepreneurship. - Understanding entrepreneurs and the activities they perform. - Familiarizing the students with role of entrepreneurship in the economy. - Understanding and performing the process of planning a new venture: <i>Identifying and developing entrepreneurial opportunities; Analyzing business opportunities; Use of methodology for developing solutions, market analysis and financial data; Using a business plan to explore the issues of funding of new venture, building the entrepreneurial team and of financial planning. Through group project work (developing business plans) students also develop teamworking skills.</i> 				
Intended learning outcomes	<ul style="list-style-type: none"> - Students familiarize themselves with basic entrepreneurial concepts and roles of entrepreneurs. They develop the understanding of the essence of entrepreneurial perspective and possess basic knowledge of the role of entrepreneurs in the economy. - Students develop the understanding of the entrepreneurial way of thinking and of the entrepreneurial decisions. They develop capacity to analyze business opportunities and to plan the activities connected to a new venture and demonstrate this ability by developing a business plan. - Students demonstrate the ability to search for and select appropriate sources of data (primary and secondary) and the ability to interpret it. They demonstrate the capacity to work effectively as part of a working team. 				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. The Entrepreneurial perspective: The nature and importance of entrepreneurs and entrepreneurship 2. Business ideas and product development approaches 3. From the opportunity to the business model: <i>Developing solutions, prototyping; Understanding your customer; Market analysis; Business models; Marketing plan; Operations and R&D plan; Organizational plan; Assessment of risk.</i> 4. Assessing a New Venture's Financial Strength and Viability 5. Funding of new and young ventures 6. The importance of intellectual property. 7. Entrepreneurial growth & Harvesting 				

Fundamentals of Financial and Management Accounting

Course level	BACHELOR				
Course code	195171				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	-	30	15	105
Teaching Staff	Simon Čadež (simon.cadez@ef.uni-lj.si) Barbara Mörec (barbara.moerec@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Students will be able to understand information disclosed in financial statements and competent to evaluate a range of managerial decisions with appropriate accounting techniques.				
Intended learning outcomes	Ability to understand financial statements and capacity to evaluate business decisions with appropriate accounting techniques.				
Content (Syllabus outline)	1. Financial reports for different information users 2. Role of accounting information for external users 3. Regulative framework of financial reporting in Slovenia and the EU 4. Annual report 5. Accounting measurement of income, assets and liabilities 5.1. Fair value measurement of fixed assets 5.2. Measurement of financial investments 5.3. Measurement of owners' equity 6. Financial statements 6.1. Statement of movements in equity, distributable profit 6.2. Cash flow statement 7. Introduction to management accounting and managerial decision making 8. Relevant accounting categories for decision making 9. Cost volume profit analysis 10. Full cost estimation 11. Budgeting and control 12. Short term and long term decisions evaluation 13. Reflection				

Global Business Communication

Course level	BACHELOR				
Course code	195913				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	36	-	-	39	105
Teaching Staff	Nada Zupan (nada.zupan@ef.uni-lj.si) Jana Žnidaršič (jana.znidarsic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<p>- Global Business Communication analyzes the role of culture in communicating with business people from different cultural backgrounds. Students gain awareness of the effects of culture and an understanding of cross-cultural concepts and learn to identify the major cultural characteristics that influence business practices and decisions around the world.</p> <p>- Developing personal characteristics, based on different culture background awareness, since effective intercultural communication includes open-mindedness, curiosity, patience, and self-awareness.</p> <p>- Developing a competence of “How do I foster learning and communication through a global perspective?”. In addition, students explore the effects of culture in such areas as marketing strategies, negotiating, decision-making, leadership, and sales. They also learn to critically analyze cultural dimensions.</p>				
Intended learning outcomes	<p>Students do understand that communicating within different cultures can be challenging. They do understand that patience and understanding are essential to creating an open and direct line to ensure achieving business goals successfully. Students get insight into how to communicate effectively with business partners from different cultures. They get necessary practical knowledge (communication skills) for effective intercultural communication.</p>				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. The basics of business communication 2. Persuasive communication: <i>Psychological and social elements of communication</i> 3. Positive consequences of global environment 4. Persuasive communication using different assertiveness techniques 5. Cross-cultural communication 6. Business Etiquette 7. Business negotiations 8. Virtual meetings 9. Effective cross-cultural communication 				

Global Finance

Course level	BACHELOR				
Course code	195912				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	36	-	-	39	105
Teaching Staff	Mojmir Mrak (mojmir.mrak@ef.uni-lj.si) Vasja Rant (vasja.rant@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	The basic objective of the course is to give the students the basic concepts of global finances as a framework for running effectively businesses in an international financial environment. After completing this course, students will be able to: understand and interpret trends in a rapidly changing global financial environment, make basic balance of payment sustainability analyses as well as to assess exchange rate developments, assess specific risks in global finances, i.e. foreign exchange risk and country risk and understand basic characteristics of trade finance and investment instruments				
Intended learning outcomes	Knowledge and understanding of: <i>Basic trends in global finances; Balance of payments and exchange rates as the two main concepts in global finances; Instruments for managing specific risks in global finances, namely the foreign exchange risk and the country risk; Basic financial instruments for foreign trade and investment financing.</i>				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Concept of global finances 2. Balance of payments 3. Exchange rates and foreign exchange markets 4. International parity conditions 5. International monetary system 6. Specific risks in international finance and management of these risks 7. Instruments for financing international trade 8. International capital flows (public and private) 				

History of Economic Thought

Course level	BACHELOR				
Course code	195215				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	15	15	15	105
Teaching Staff	Andrej Sušjan (andrej.susjan@ef.uni-lj.si)				
Prerequisites	Foundations of microeconomics and macroeconomics.				
Course objectives and competences	The objective of the course is to present the main stages in the development of economic theory, and to emphasize the relevant methodological, analytical and policy aspects of various schools in the history of economic thought. To develop the ability of critical comparative analysis of different approaches and paradigms in the evolution of economic theory.				
Intended learning outcomes	Knowledge of the paradigmatic differences between classical and neoclassical economics; understanding the relation between modern economic schools and the past development of economic theory.				
Content (Syllabus outline)	1. Methodological aspects of the history of economic thought 2. The beginnings of economic thought - Ancient world and the Middle Ages 3. Mercantilism 4. Early classical authors 5. Classical political economy 6. Socialist economic thought 7. Marginalist revolution and the rise of neoclassical economics 8. Institutionalism 9. Theories of the business cycle 10. Keynesian revolution in economic theory 11. Theories of imperfect competition 12. Neoclassical synthesis 13. Monetarism and the theory of rational expectations 14. New Keynesian and Post-Keynesian economics 15. New neoclassical synthesis				

Hotel Management

Course level	BACHELOR				
Course code	195233				
ECTS credits	6				
	Lectures 36	Seminar -	Tutorial -	Other type of learning 39	Individual work 105
Teaching Staff	Ljubica Knežević Cvelbar (ljubica.knezevic@ef.uni-lj.si)				
Prerequisites	-				
Course objectives and competences	<ul style="list-style-type: none"> • to get to know the hospitality industry • to learn about the organization of the hospitality industry • to learn how to apply managerial techniques in the hospitality industry • to learn international standards in the hospitality industry • to learn the economics of the hospitality industry • to get to know Slovenian hospitality industry 				
Intended learning outcomes	<p>Students get to know basic literature, relevant sources and leading authors in the field. They upgrade knowledge of tourism with specific knowledge and practical examples of the hospitality industry. They acquire the basic concepts, methods and practical problem solving that enable them to integrate theoretical knowledge, and methods with practical examples. The course stimulates independent analytical work, problem-solving and upgrading knowledge with new methods and software tools. Gained knowledge will allow students linking the hospitality industry with other areas of tourism and management of other tourism enterprises. Students can develop their own perspective to the topic, monitor and upgrade those perspectives with new theoretical and practical solutions. The course accelerates the use of contemporary domestic and foreign literature, the integration of theoretical and practical solutions in concrete cases. Students will work individually and within the groups.</p>				
Content (<i>Syllabus outline</i>)	<ol style="list-style-type: none"> 1. Introduction and presentation of the course 2. Hospitality industry and its importance in tourism 3. Organization of work in hospitality industry <ol style="list-style-type: none"> 3.1. Organisation in hotel 3.2. Hotel industry structure 3.3. Categorization and technical standards in hospitality 3.4. Organigram and workforce in hospitality 4. Governance in the hospitality industry 5. Sales in the hospitality industry 6. Controlling the hospitality industry 7. Management of employees in the hospitality industry 8. Benchmarking in the hospitality industry 9. Review of the hospitality industry in Slovenia 10. Case studies 				
Learning and teaching methods	<p>Lectures: 3 hours per week - lectures are based on theoretical knowledge of the hospitality principles and hotel industry specific managerial aspects. Tutorials and seminars: 3 hours per week - based on solving the case studies based on real-life problems from the industry. Students choose to study the case and prepare a seminar paper work on this topic. Seminar papers are produced in a group, written and presented in class. Guest lectures from practice will be invited to the seminars.</p>				

Human Resource Management

Course level	BACHELOR				
Course code	195170				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	15	15	15	105
Teaching Staff	Matej Černe (matej.cerne@ef.uni-lj.si) Robert Kaše (robert.kase@ef.uni-lj.si) Nada Zupan (nada.zupan@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To get students acquainted with theories which are important for understanding human resource management in order to achieve organizational goals. To develop students' capabilities for effectively managing people at work. To develop managers with high ethical standards and pursuing corporate social responsibility.				
Intended learning outcomes	Basic understanding of a human being as an employee in an organization. Understanding of the meaning of work diversity with regard to employee abilities. Knowledge about employee competencies for high performance. Understanding of interpersonal relationships. Knowledge is directly applicable to practice, where it is important to motivate desired behavior in order to achieve goals. Knowledge gained at this course can be used for critically assessing the existing theory and practice. Developed skills for ethical behavior when managing people. Ability to design creative solutions regarding HRM problems.				
Content <i>(Syllabus outline)</i>	1. Definition and goals of HRM 2. HRM and the individual 3. Job Analysis and Design 4. HR planning 5. Recruitment, selection & placement 6. Training & development 7. Careers & career management 8. Performance management 9. Employee relations 10. Compensation 11. Retention and downsizing 12. Legal issues in employment relationship 13. International HRM 14. Strategic HRM 15. Ethical issues in HRM 16. HR trends & challenges

International Business Law

Course level	BACHELOR				
Course code	194160				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	36	-	-	39	105
Teaching Staff	Mitja Kovač (mitja.kovac@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<p>Understanding how the law affects business is absolutely essential to ensure students entering the profession with effective managing knowledge to deal with the myriad legal implications businesses are subject to. To be successful in a business career, students must have knowledge of the laws most commonly affecting undertakings, and the ability to apply these laws in business situations. The aim of this course is to get students acquainted with the main legal concepts, features, comparative perceptions and to equip them with skills ensuring their correct decisions, while at the same time enabling them to readily identify when an expert advice is required. This course ensures students with tools and knowledge for answering legal questions with the reference to international treaties, international commercial and business law and with the reference to the laws of UK, USA, Germany, Italy and France (representing the main four legal families), which is crucial to being successful in daily business life.</p>				
Intended learning outcomes	<p>This course offers an introduction to international business, private and corporate law for students who are not graduates in or acquainted with the law. The course starts with a description of the basic legal principles, rules and institutions, and with the description of the differences between the two legal systems within the European Community: the continental and the common law system. In the second part of the course basic principles of civil law, such as good faith, fraud, mistake, force majeure and reasonableness, will be discussed. Another part of the course covers themes of contract law, tort law, business law and corporate law. Problems of validity of contracts, non-performance of contracts, the difference between negligence and strict liability, problems of causation and legal rules governing the foundation, incorporation, organization and closure of corporations, other business entities and forms are some of the most important topics of this course. These topics will be analysed from a comparative legal and economic perspective. This course also offers an introduction to the European law, and focuses on the institutional and substantial aspects of EU law. Furthermore, course also offers the introduction to the national, international and European Intellectual property law and discusses the law in relation to copyright, patents, designs, trade marks and passing offs.</p>				
Content (Syllabus outline)	<p>Lecture 1: Introduction: legal systems, sources of law, core concepts and methods, international law, international organisations, differences between modern Civil and Common law systems, Islamic law, GATT, WTO, regional trade in Europe, Africa, the Middle East and Asia</p> <p>Lecture 2: International sales, credits and the commercial transaction, documentary transaction and the risk of loss, dispute resolution in a global marketplace, CISG convention, performance of contracts, remedies for breach, events beyond the control of the parties, excuses for non-performance</p> <p>Lecture 3: Legal issues in international transportation and letters of credit (law and banking practice), documentary sale, allocating shipping responsibilities and the risk of loss, transaction risk, marine cargo insurance, liability of the carriage of goods by sea and by air, liability of ocean transportation intermediaries</p> <p>Lecture 4: Contract drafting and international transacting – strategic and economic aspects, risk allocation, incentives mechanisms, reward systems, transaction costs, opportunism, endowment effect, loss aversion, carrots and sticks, alternative incentive mechanisms</p>				

Lecture 5: International marketing law, international intellectual property law, TRIPS, international protection of patents, trademarks and other intellectual property franchising and licensing, domain names, copyrights, intellectual property transfer agreements

Lecture 6: Competition law and business regulation, international competition law, international mergers and acquisitions, abuse of dominant position, state aid, cartel agreements, extraterritorial effects, unfair advertising techniques, differences between EU and US competition law

Lecture 7: Seminar paper presentation session

Lecture 8: Moot court – international business law and economics in courts

Introductory Statistics

Course level	BACHELOR				
Course code	195153				
ECTS credits	6				
	Lectures 45	Seminar 15	Tutorial 15	Other type of learning -	Individual work 105
Teaching Staff	Mojca Bavdaž (mojca.bavdaz@ef.uni-lj.si) Irena Ograjensek (irena.ograjensek@ef.uni-lj.si) Jože Sambt (joze.sambt@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To make students familiar with the range and usefulness of statistical methods and statistical information in the business environment that in practice support decision making. To introduce students to the basics of statistical research at the level of business, industry and national economy. To enable students to correctly use data from official statistics and results of statistical research prepared by specialised research agencies. Intended learning outcomes: Familiarisation with the basic knowledge from research methods and with the basic use of analytical programmes Excel and SPSS. Acquisition of communication skills for written and oral communication of research results.				
Intended learning outcomes	The course aims at familiarising the students with basic quantitative and qualitative approaches and methods used for studying socio-economic phenomena, with emphasis on those specific for economics and business sciences. This knowledge is directly applicable to the study of basic characteristics of economic phenomena. It is necessary for attending and understanding other economic and business courses as well as for understanding current national and world economic situation. It also enables students to understand and critically evaluate information about both broader and specific social and economic environment, published by research institutions and media. It also enables users to select the most appropriate methods for the purpose of analysing basic characteristics of the studied phenomenon, and correctly interpret quantitative and qualitative measurements of this phenomenon's characteristics.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. INTRODUCTION: History of statistics; Quantitative literacy; Statistics in business and economics; Levels and tools of analysis in business and economics. 2. STATISTICAL MEASUREMENT: Statistical units, population, sample; Concepts and variables; data typologies; Variable typologies. 3. SECONDARY DATA SOURCES: European and Slovenian statistical system; Secondary data typologies, usefulness, search strategies and evaluation. 4. PRIMARY DATA COLLECTION: Research plan; Surveys and censuses; Real-time data collection. 5. DATA PREPARATION AND VISUALISATION: Data cleaning; Ad-hoc and standard classifications; Basic tabular and graphical visualisation approaches and tools. 6. RELATIVE NUMBERS – STRUCTURES: Typologies; Basic tabular and graphical visualisation approaches and tools; Applications in practice. 7. RELATIVE NUMBERS – COEFFICIENTS: Typologies; Basic tabular and graphical visualisation approaches and tools; Applications in practice. 8. RELATIVE NUMBERS – SIMPLE INDICES: Typologies; Basic tabular and graphical visualisation approaches and tools; Analysis of temporal dynamics; Analysis of index series; Applications in practice. 9. RANKING AND FREQUENCY DISTRIBUTIONS: Basic tabular and graphical visualisation approaches and tools; Quantiles and quantile ranks; Applications in practice. 10. MEASURES OF CENTRAL TENDENCY: Typologies; Average relative numbers; Average indicators of temporal dynamics; Applications in practice. 				

11. RELATIVE NUMBERS – AGGREGATE INDICES: Typologies; Analysis of index series (cont.); Applications in practice.

12. MEASURES OF VARIABILITY AND CONCENTRATION: Typologies; Variability and distributions; Graphical visualisation; Applications in practice.

IT Projects

Course level	BACHELOR				
Course code	195902				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	36	-	-	39	105
Teaching Staff	Talib Damij (talib.damij@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	In recent time IT project management becomes one of the most interested fields. IT projects represent expensive investments for the company and include high level of risk, which may cause money and time losses for the customer. Students will be acquainted with IT project management that enable successful management and completion of projects. The main objective of this course is to create successful future project managers.				
Intended learning outcomes	In this course students learn about the concepts of IT project management. Knowledge of this area is essential for the successful management of various IT projects. Student will apply the learn concepts of IT project management into practical examples using MS Project software. Knowing the project management phases of initiation, planning, execution, controlling and closing will enable students involvement in reality.				
Content (Syllabus outline)	1 Agile project management 2 Scrum method 2.1 Scrum artifacts 2.2 Scrum team-roles 2.3 Scrum planning 2.4 Scrum sprinting 2.5 Scrum review 2.6 Scrum retrospective				

Macroeconomics 1

Course level	BACHELOR				
Course code	195159				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	15	15	-	105
Teaching Staff	Aleksandar Kešeljević (saso.keseljovic@ef.uni-lj.si) Bogomir Kovač (bogomir.kovac@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To develop fundamental knowledge of macroeconomic analysis and policy in the institutional framework of the EU and to develop an understanding of the underlying economic logic of the workings of a mixed economy and the ways in which macroeconomic problems are resolved. To develop a level of theoretical thinking and application of the fundamental knowledge in an analysis of equilibrium and changes in the national economy. To develop the ability to apply positive knowledge in the analysis of measures and positions of economic policy-makers.				
Intended learning outcomes	To thoroughly understand the basic economic concepts in order to be able to understand characteristics of different economic systems in a market economy, state-controlled economy, and mixed economy. The students shall learn to understand the market failures and government intervention failures. Understanding of main macroeconomic aggregates, theories, problems, economic policy instruments, processes and the understanding of macroeconomic theory and insight into various policy-makers experience, critical evaluation of their work and of the compliance between theoretical principles and political conduct. The skill of applying theory in decision-making in business and economics in a modern world.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Basic economic institutions. Macroeconomic problems and public choice. 2. Macroeconomic processes and national income accounting. Economic and social welfare. Sustainable development. 3. Macroeconomic model of full employment. Three markets. AS/AD model. General equilibrium. 4. Macroeconomic model of unemployment. Keynesian model. IS/LM model. Disequilibrium. 5. Money and banking system. Money instruments and politics. EU monetary system. 6. Fiscal system and politics. Automatic fiscal policy and balanced budget. EU and fiscal federalism. 7. International markets. Exchange rate mechanisms. Exchange rate and balance of payments. EU and euro. 8. Economic problems and EU: economic growth and productivity, business cycles, unemployment, inflation. 9. Economic policy. Tolls and instruments. Different approach to solve economic problems. EU and efficiency of macroeconomic policies. 10. Use economic reasoning. Different macroeconomic schools and theories. 				

Marketing Planning

Course level	BACHELOR				
Course code	195918				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	36	-	-	39	105
Teaching Staff	Mateja Bodlaj (mateja.bodlaj@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To show students how to prepare a marketing plan based on the knowledge of principles of marketing and to develop competences for a systematic approach toward marketing planning. To guide students step by step from the analysis (<i>Where are we?</i>) through objectives (<i>Where do we want to go?</i>) to strategies and tactics (<i>How will we get there?</i>). To impart the need for a careful analysis as a necessary basis for a good marketing planning.				
Intended learning outcomes	A student will get a deeper understanding of an overall process of marketing planning, with its key stages and methodological tools. An emphasis of the course is on practical application. A student will be able to lead the preparation of marketing plan in the company on the basis of multifunctional cooperation. A student can use acquired knowledge for a critical assessment of standard procedures of marketing planning in the practice. She/he will develop skills for gathering and interpretation of marketing information and for analytical thinking; she/he will get used to report (oral and written) about her/his findings and decisions; she/he will develop competences for efficient team work.				
Content (Syllabus outline)	1. Analysis of the current marketing situation 1.1. Customer needs and buying processes 1.2. Strengths and weaknesses of the current marketing mix elements 1.3. Analyzing competitors 1.4. SWOT analysis 2. Setting marketing objectives for each product/service 3. Formulating positioning strategy for each product/service 4. Required marketing programmes - the marketing mix 5. Resources, timing and responsibilities 6. Monitoring the marketing plan's implementation				

Marketing Research

Course level	BACHELOR				
Course code	195199				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	-	30	15	105
Teaching Staff	Barbara Čater (barbara.cater@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<p>To learn the role of marketing research and marketing research process. To understand the basics of marketing research that enables students to acquire quality data for marketing decision-making. To develop the ability to design and implement marketing research. To teach students how to design a questionnaire for survey and a reminder for observation. To repeat the knowledge of statistics and learn to apply this knowledge to solve specific research problems. To develop the capacity of evaluation and assessing the quality of the marketing information. Competences: ability to analyse and synthesize; ability to work in group to conduct problem solving in the area of marketing research; ability to prepare remainder for focus groups and questionnaire for survey; ability to statistically analyze data; ability to produce written reports; ability to present a group written project.</p>				
Intended learning outcomes	<p>Students are able to explain the purpose, applicability, key steps, types and methods of marketing research. Students know how to use statistical methods of data analysis on concrete data in marketing decision making. Students are able to implement key steps in the process of marketing research on a practical case, including research design, data collection and analysis, and interpretation of results. Students are able to evaluate the relevance of the specific research methods and statistical and analytical techniques for specific marketing decisions. Students develop analytical skills and systematic approach to solving marketing and business problems and the use of marketing research in the analysis, planning and monitoring of marketing activities.</p>				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. The role of marketing research; overview of the marketing research process 2. Defining the marketing research problem and developing an approach 3. Research design formulation <ol style="list-style-type: none"> 3.1. Basic research designs 3.2. Exploratory research design: secondary data and qualitative research 3.3. Descriptive research design: Survey and observation 3.4. Causal research design: experimentation 3.5. Measurement and scaling 3.6. Questionnaire design 3.7. Sampling 4. Data collection, analysis and reporting <ol style="list-style-type: none"> 4.1. Data preparation 4.2. Basic data analysis 4.3. Hypotheses testing 4.4. Correlation and regression 4.5. Report preparation and presentation 5. Ethics in marketing research 				

Organizational Behavior

Course level	BACHELOR				
Course code	195160				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	-	30	-	105
Teaching Staff	Katarina Katja Mihelič (katja.mihelic@ef.uni-lj.si) Nada Zupan (nada.zupan@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<p>The course is designed to provide students with an overview of the fundamental theoretical frameworks of behavior within organizations and to acquaint them with the latest research in the field. It includes theoretical, empirical and applications issues examined from individual, interpersonal, group and organizational perspectives. An emphasis throughout the course is given to the practical application of managing within organizations. Students will be presented with contemporary business challenges related to own and others' behavior in the workplace and identify proactive solutions to solve them.</p>				
Intended learning outcomes	<p>Upon completion of the course students will have studied classical and contemporary theories and constructs related to human behavior in work organizations that represent major topics within the field of organizational behavior. Students will also be introduced to the concepts pertaining to the recent stream of OB, positive organizational behavior. The core learning outcomes include: knowledge of major theories and concepts in OB; developing/strengthening abilities to apply theoretical knowledge in cases; knowledge about own strengths and weaknesses; strengthening critical thinking; developing interpersonal skills; developing individual competences.</p>				
Content (Syllabus outline)	<p>1. Introduction to the field, basic concepts and theories</p> <p>2. The role of individual in the organization</p> <p>2.1. Individual values</p> <p>2.2. Personality-related concepts</p> <p>2.3. Job attitudes</p> <p>2.4. Perception and individual decision-making</p> <p>2.5. Learning</p> <p>2.6. Emotions and moods in the organizational setting</p> <p>2.7. Motivational constructs and theories</p> <p>3. Group processes</p> <p>3.1. Characteristics of group dynamics</p> <p>3.2. Teamwork</p> <p>3.3. Leadership (traditional and contemporary perspective)</p> <p>3.4. Effective communication with employees</p> <p>3.5. Power and influence in the workplace (individual sources of power)</p> <p>3.6. Conflict resolution</p> <p>4. Organizational dynamics</p> <p>4.1. Stress and mindfulness in organizations</p> <p>4.2. Balancing professional and family life</p> <p>4.3. Happiness and well-being</p>				

- 4.4. Coping with conflicting demands: individual perspective and human-resource perspective
- 4.5. Organizational culture

Principles of Accounting

Course level	BACHELOR				
Course code	195162				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	-	30	-	105
Teaching Staff	Marko Hočevär (marko.hocevar@ef.uni-lj.si) Maja Zaman Groff (maja.zaman@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Understanding the role of accounting in a company and understanding of financial statements. Presentation of accounting for business transactions and presentation of accounting for basic economic categories. Introduction to financial statement analysis.				
Intended learning outcomes	Student understands and distinguishes between different types of accounting (financial accounting, cost accounting, management accounting). Student comprehends the basic economic categories (assets, liabilities, costs, revenues, expenses, profit/loss) and basics of their accounting treatment. Understanding the accounting for economic categories provides the following knowledge to the student: a conceptual understanding of financial statements; understanding how various business events reflect in financial statements and how they impact the company's financial results; a conceptual understanding of the financial analysis; understanding the importance of financial statements auditing.				
Content <i>(Syllabus outline)</i>	1.Introduction to accounting 2.Introduction to the balance sheet and the income statement 3.The basic accounting equation and principles of double-entry bookkeeping 4.Asset accounts 5.Capital and liabilities accounts 6.Cost accounts 7.Revenue and expense accounts 8.Accounting for prepaids and accruals 9.Financial statements (balance sheet, income statement, cash flow statement) 10.Comprehensive exercise with preparation of financial statements 11.Financial statements analysis (horizontal and vertical analysis, standard financial ratios)				

Selling: Principles and Methods

Course level	BACHELOR				
Course code	195092				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	36	-	-	39	105
Teaching Staff	Čater Barbara (barbara.cater@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<ul style="list-style-type: none"> - Learn the theoretical basis and practical introduction to the skills necessary for personal selling in business and consumer markets. - Learn the planning, preparation and implementation of direct sales activities, especially the sales call and negotiating with potential or existing customers. - Learn the tools, techniques and methods for practical implementation of selling activities. - Learn about the methods of selection, training and performance measurement and motivating sales staff. 				
Intended learning outcomes	<ul style="list-style-type: none"> - Students learn theoretical frameworks and acquire the basic skills necessary for personal selling in business and consumer markets. - Students will know the use of tools, techniques and methods for practical implementation of direct sales activities and will be able to plan, prepare and implement sales activities, especially the sales call and negotiating with potential or existing customers. - Students will understand the planning, preparation and implementation of direct sales activities, the methods of selecting, training and performance measurement and motivate sales staff. - Students acquire the skills of preparation and implementation of direct sales activities, selection, training and performance measurement, motivating people, oral and written reporting and resolving problems in the seminar work. 				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Introduction to Selling 2. Ethical and Legal Consideration 3. Consumer Behavior and Communication 4. Principles of Personal Selling <ol style="list-style-type: none"> 4.1. Selling 4.2. Negotiation 4.3. Relationship Marketing 5. Designing the Salesforce <ol style="list-style-type: none"> 5.1. Salesforce Objectives 5.2. Salesforce Strategy 5.3. Evaluating and Motivating Salesforces 6. Managing the Salesforce <ol style="list-style-type: none"> 6.1. Recruiting and Selecting Sales Representatives 6.2. Training Sales Representatives 6.3. Directing Sales Representatives 7. Territory Management 8. Understanding the Cost of Sale 				

Services Marketing

Course level	BACHELOR				
Course code	195200				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	36	-	-	39	105
Teaching Staff	Barbara Culiberg (barbara.culiberg@ef.uni-lj.si) Tomaž Kolar (tomaz.kolar@ef.uni-lj.si)				
Prerequisites	Basic marketing knowledge is recommended.				
Course objectives and competences	To upgrade basic knowledge of marketing and to inform students about relevance of Services sector in the economy and about marketing challenges of services. Comprehensive elaboration of extended marketing mix elements at services marketing and pointing out problems at understanding and measuring of services quality. To inform students on practical examples about tools and approaches available for efficient implementation of marketing in service organizations.				
Intended learning outcomes	Students will upgrade basic knowledge about marketing, with principal concepts and approaches that are specific for services marketing, and with understanding and measuring of services quality. They will be informed about basic schools of services marketing and about relevant empirical findings in this field. Acquisition of knowledge is based on theory and analysis of practical case studies, used for examination of critical incidents in the field of services marketing. Based on acquired knowledge students will be able to integrate particular elements of services marketing and management into coherent whole. Knowledge given at this course enable students not only understanding of basic, contemporary and holistic issues of development of service company, but also critical evaluation of theoretical models and practice of marketing in domestic market and abroad. Student will develop skills needed for use of domestic and foreign literature, collection and interpretation of data and data analysis and for decisions needed at services marketing activities; they will learn how to report (in oral and in written) about their findings and decisions; they will also develop skills for efficient group work.				
Content (Syllabus outline)	1. Services in the modern economy 2. Understanding Service Processes 3. Customer contact with a service company and managing service encounters 4. Service from the customer's viewpoint and the purchase process for services 5. Productivity and quality as the main challenge for a service company 6. Managing relationships and building customer loyalty 7. Complaint handling and service recovery 8. Service positioning and new service development 9. Core service and supplementary services 10. Designing service delivery 11. Price and other costs of services 12. Marketing communication 13. Integrating marketing with other management functions				

Socio-Economic Development and Contemporary Slovenia

Course level	BACHELOR				
Course code	195191				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	36	-	-	39	105
Teaching Staff	Rok Spruk (rok.spruk@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	The course informs the students about the economic and political history of Slovenia and its longrun economic and institutional development in the comparative perspective using data-driven techniques to understand the patterns of long-run development. The acquired knowledge enables the student to understand better the present political, economic position of Slovenia in modern Europe and the rest of the world in a comparative and rigorous perspective. It also offers the historical and contemporary survey of Slovenia's economic growth and both formal and informal institutional framework.				
Intended learning outcomes	The student can use the acquired knowledge for the further study and better understanding of the present political, economic and cultural position of Slovenia in the contemporary Europe. It is the basis for better understanding and analysis of the current developments in Slovenia and its economic and political position in Europe. In the same way, the student can better analyse the historical aspect of the present local, regional, and national business practice.				
Content (Syllabus outline)	12. Comparative case studies in economic history and long-run development 13. The use of comparative case studies to understand the impact of institutional changes on economic development 14. Institutional integration and economic growth 15. The long shadow of history on economic development 16. Democracy and economic growth: friends or foes? 17. Long-term effects of the partition of Trieste after World War 2 18. Two centuries of institutional instability and long-term economic development 19. Institutional collapses, Yugoslav war and Slovenia's economic growth in post-independence period 20. Can good policies overcome weak institutions? 21. Is culture more important than institutions for long-term economic development? 22. Why is Slovenia not as rich as Switzerland and Australia?				

Sustainable Tourism

Course level	BACHELOR				
Course code	195210				
ECTS credits	6				
	Lectures 30	Seminar 15	Tutorial 15	Other type of learning 15	Individual work 105
Teaching Staff	Kir Kuščer (kir.kuscer@ef.uni-lj.si)				
Prerequisites	-				
Course objectives and competences	To introduce to students the issue of sustainable development in tourism and the basics of this concept. To learn about the basic guidelines for 'sustainable' behavior of individual entities of tourism industry: both at national and the enterprise level of operation. Present in detail the destination concept and its differences from the product or individual entrepreneurial concept.				
Intended learning outcomes	Students will get acquainted with the basic literature from the field of sustainable, alternative, soft and eco-tourism. They will get to know and understand the connections between tourism and different environments as well as the basic examples of good practice in sustainable and eco-tourism development. Theoretically founded knowledge and relations will be applied to specific cases of sustainable and eco-tourism development (towns, regions, states). The usefulness of knowledge is also reflected through studies of practical cases and through cooperation with the private and public sector. With their own application of the gained knowledge and the method of transfer of good practices onto the selected fields, companies and agents, students will be able to reflect on their gained knowledge and experiences. During the implementation of the course the students will acquire, develop and strengthen specific skills: use of domestic as well as foreign literature especially articles, internet sources and the use of electronic library of World Tourism Organization; collecting data from traditional and electronic sources; assessment and interpretation of data; use of teaching tools, mostly electronic; use of different procedures and skills of public appearance as well as written and oral reporting and discussion; critical thinking and reporting; identifying and solving problems; project group participation, etc.				
Content <i>(Syllabus outline)</i>	1. Introduction 2. Tourism system and its environment 2.1. Economic environment 2.2. Natural environment 2.3. Cultural environment 2.4. Social environment 3. Environmental elasticity of tourism demand 4. Sustainable tourism 4.1. Concepts 4.2. Instruments 4.3. Sustainable tourism indicators 4.4. Critics 5. Other concepts of environmentally friendlier tourism 5.1. Alternative tourism 5.2. Eco tourism 6. Local inhabitants and sustainable tourism development 7. Case studies				

Taxes and Corporations

Course level	BACHELOR				
Course code	195168				
ECTS credits	6				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	15	15	15	105
Teaching Staff	Andreja Cirman (andreja.cirman@ef.uni-lj.si) Mitja Čok (mitja.cok@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	The aim of the course is to present the main theoretical elements of public finance system: main types of taxes and social security contributions paid by corporations, budget process and public debt. Last part of the course is devoted to the EU tax harmonisation and EU budget. In addition, practical examples will enable students to independently solve problems connected with taxes.				
Intended learning outcomes	Students will learn basic elements of fiscal systems; both the theoretical and practical aspects. The emphasis is given to taxes paid by corporations, especially through case studies during the exercise sessions. During the process students will be able to learn how to use theoretical knowledge, data sources and how to interpret the results.				
Content <i>(Syllabus outline)</i>	1. Introduction 2. Public goods 3. Political economy 4. The health system 5. Social security system 6. Income redistribution 7. The personal income tax 8. The corporate income tax 9. Deficit finance 10. Taxes on consumption and wealth 11. Tax harmonisation in the EU 12. EU Budget				

MASTER COURSES in WINTER semester

Accounting Information for Decision-Making

Course level	MASTER				
Course code	196605				
ECTS credits	7				
	Lectures 45	Seminar 30	Tutorial -	Other type of learning 15	Individual work 120
Teaching Staff	Simon Čadež (simon.cadez@ef.uni-lj.si) Marko Hočevár (marko.hocevar@ef.uni-lj.si) Sergeja Slapničar (sergeja.slapnicar@ef.uni-lj.si) Metka Tekavčič (metka.tekavcic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Learning which accounting information are needed for various business decisions and developing the knowledge of financial statement and the impact of various decision on taxes. Performing financial statement analysis and defining the role of auditing for true and fair reporting. Understanding costs and their different classifications and understanding management accounting tools and techniques for decision-making.				
Intended learning outcomes	Understanding: the role of financial statements and the impact of managerial decision on the statements; financial statement analysis; the role of external audit and responsibility of managers for financial reporting; managerial accounting information for decision-making.				
Content (Syllabus outline)	1. Financial accounting information 1.1 Understanding fundamental financial statements and the effects of various managerial decisions on profit, financial position of the company and taxes 1.2 The importance of cash flows 1.3 Responsibility of managers for financial reporting and the role of auditing 1.4. Financial statement analysis: key financial indicators for understanding profitability, asset turnover, financial position and liquidity of the company 1.5 Accounting information to evaluate a company's value and intellectual capital 2. Managerial accounting information 2.1 Cost concepts and cost classifications 2.2 Cost Volume Profit Analysis 2.3 Contemporary costing methods 2.4 Relevant costs for decision making 2.5 Product and customer profitability analysis 2.6 Budgeting and control 2.7 Evaluation of business decisions 2.8 The link between performance measurement and managerial incentive system				

Advanced Macroeconomics

Course level	MASTER				
Course code	196928				
ECTS credits	7				
	Lectures 45	Seminar 45	Tutorial -	Other type of learning 30	Individual work 90
Teaching Staff	Igor Masten (igor.masten@ef.uni-lj.si) Sašo Polanec (saso.polanec@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To gain insight and a sense of interconnectedness macroeconomic categories and questions with the construction of a macroeconomic model. To acquaint students with the latest developments, debates and research in the field of macroeconomics. To examine the intertwining of product markets, production factors, financial markets and real estate markets. To connect microeconomic and macroeconomic phenomena. To examine the individual fields of macroeconomics with an emphasis on analysis and empirics. To pay particular attention to macroeconomic issues in Slovenia and the EU.				
Intended learning outcomes	TBD				
Content (Syllabus outline)	1. Macroeconomic model of aggregate supply and demand, determining the level and growth of prices and production volumes 2. New models of economic growth with applications for a growth policy 3. Realistic Business Cycles 4. Consumption, investment, unemployment 5. Inflation and monetary policy 6. Budget deficits and fiscal policy 7. Co-ordination of economic policies within the EU				

Analysis for Marketing Decisions

Course level	MASTER				
Course code					
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Vesna Žabkar (vesna.zabkar@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To deepen the understanding of the needs of analysis for marketing, according to the company's market position, market development stage and changing supply and demand in selected market. To show how to obtain and analyze information necessary for strategic decisions in marketing and to answer the basic questions of where to compete and how to compete. To provide the necessary tools for the analysis of empirical data to enable participants to make better decisions with less risk to the business situations that require the development of marketing strategies.				
Intended learning outcomes	Understanding the complexity of the process of adopting marketing strategies and the importance of decision factors and risks in the present. Knowledge of the basic analytical tools and methods used to support the development of marketing strategies. Presenting the usefulness and implications of the various tests used for the purpose of making strategic decisions in marketing - focusing on the suitability of various analytical tools to search for market opportunities, develop competitive advantages and the choice of alternative competitive strategies. Insight into the similarities, differences and limitations of various paradigms, theories, models and analytical tools that form the basis for the development, planning and evaluation of marketing strategies. Comprehensive analysis of skills issues and develop analytical skills that are necessary for strategic decisions in complex, dynamic and uncertain contexts of contemporary markets.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Introduction to analysis for marketign decisions 2. Analysis based on segmentation 3. Data science for marketers 4. Competitor analysis 5. Sales forecasting models 6. New product development based on conjoint analysis 7. Customer satisfaction measurement 8. Customer value and customer lifetime value 9. Searching solutions for unsatisfied customer needs, instrduction to consumer neuroscience 10. Predictive modeling 11. Analytics for marketing success 12. Analytics in digital marketing 13. External environment analysis for marketing decision making. 				

Big Data Management and Technologies

Course level	MASTER				
Course code	196317				
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Jurij Jaklič (jurij.jaklic@ef.uni-lj.si) Aleš Popovič (ales.popovic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Introduce students with basic concepts of big data and analytics, characteristics and specifics compared to traditional data analytics. Introduce students with contemporary techniques and tools that are used for data preparation and analysis in the context of big data. Introduce students with approaches for implementing big data analytics (identification of opportunities, value, barriers) and key success factors.				
Intended learning outcomes	Understanding the concept of big data and key technologies in the field. Mastering contemporary tools for data acquisition, preparation, and analysis. Justification of used approaches/methods. Understanding of the process for implementing big data analytics and potential challenges.				
Content (Syllabus outline)	1. Definition and applications 2. Overview of technologies 3. Data acquisition and preparation 4. Data infrastructure 5. Advanced data mining methods 6. Big data analytics 7. Text mining 8. Implementation of big data analytics				

Brand Management

Course level	MASTER				
Course code	196078				
ECTS credits	7				
	Lectures 45	Seminar 30	Tutorial -	Other type of learning 15	Individual work 120
Teaching Staff	Maja Konečnik Ruzzier (maja.konecnik@ef.uni-lj.si)				
Prerequisites	Prior marketing knowledge is recommended.				
Course objectives and competences	To understand the importance of latest brand management approaches in modern companies To develop knowledge about two-dimensional approach to branding To develop competences of transferring and developing basic methods, analyses and approaches in branding To encourage students to critically evaluate and develop appropriate branding strategies for concrete domestic and international brand				
Intended learning outcomes	<ul style="list-style-type: none"> - Knowledge and understanding of brands as a strategic tools. - Knowledge about balanced or two-dimensional approach to branding as an appropriate strategic approach in modern companies. - Development and understandance of appropriate branding strategies in domestic and global environment. - Transfer and critical evaluation of two-dimensional approach for concrete domestic or international brand. 				
Content (Syllabus outline)	<p>1. Complex nature of a brand: Demand and supply side perspective</p> <p>2. Demand side perspective to brand: Brand equity</p> <ul style="list-style-type: none"> - Brand equity elements (awareness, image, perceived quality, loyalty) <p>3. Supply side perspective to brand: Brand identity</p> <ul style="list-style-type: none"> - Pre-strategic analyses (industry analysis, competition analysis, customer analysis, brand/company analysis) - Key identity elements: vision, mission, vizualisation (name, symbol, slogan), brand attributes/benefits, culture, personality, relationship <p>4. Brand implementation</p> <ul style="list-style-type: none"> - Inside the company: Internal branding - Outside the company: Selecting appropriate combination of tools which reach brand customers (as a combination of traditional and modern tools) - Endorsers - Brand strategy; brand extension - Branding in digital area 				

Building Leadership Capacity

Course level	MASTER				
Course code	196668				
ECTS credits	7				
	Lectures 30	Seminar -	Tutorial 15	Other type of learning 15	Individual work 15
Teaching Staff	Melita Balas Rant (melita.rant@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Development of conceptual understanding of central theories (<i>knowing</i>), while practicing core leadership skills (<i>doing</i>) and developing inclusive leadership attitudes (<i>being</i>).				
Intended learning outcomes	<ul style="list-style-type: none"> - Increased self-awareness (»Who am I, what are my beliefs and values, what do I stand for?«); - Enhanced situational awareness (»In what situation am I in?«; with focus on ethical dilemmas emergent in the situations); - Capacity to self-regulate own behavior (doing), cognition (knowing) and attitude (being) within simulated learning environment; - To move upward one order along a neo-Piagetian adult development scale 				
Content (Syllabus outline)	<p>Development of conceptual understanding of central theories of (knowing):</p> <ol style="list-style-type: none"> 1. Humane development: <ul style="list-style-type: none"> - Loevinger's and Cook-Greuter human development theory of psyche; - Kegan's human development theory of mindset; - Kohlberg's stages of moral development; 2. Leadership theories addressing factors that attributed most to the leadership emergence and leadership effectiveness: <ul style="list-style-type: none"> - Trait approach to leadership and leadership emergence; - Situational, contingency and path-goal leadership theories; - Leader-follower exchange theories; - Charismatic, transformational and transactional leadership; - Dark-side of leadership 3. Merger of adult development theories with leadership theories <ul style="list-style-type: none"> - Barrett's theory of individual and organizational consciousness - Scharmer's U-theory - Tobert theory of leadership action inquiry <p>While practicing core leadership skills across a set of exercises:</p> <ul style="list-style-type: none"> - Clarity and assertiveness of communication - Capacity to express opinion, provide justifications - Self-reflection and introspection - Inspiration/visioning <p>And developing inclusive leadership attitudes:</p> <ul style="list-style-type: none"> - Incisiveness - Morality and ethical sensitivity - Resilience 				

Business Logistics Management

Course level	MASTER				
Course code	196594				
ECTS credits	7				
	Lectures 45	Seminar 30	Tutorial -	Other type of learning 15	Individual work 120
Teaching Staff	Aleš Groznik (ales.groznik@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Deal with different aspects of business logistics - industry aspect, supply chain aspect, logistics aspect, internal aspect, the external aspect of the logistics aspect of the changed business models, business change management and computerization. Present business challenges in the field of business logistics (e.g. outsourcing (3PL)) and possible ways to address them.				
Intended learning outcomes	Introduce students to understand the role and importance of logistics with an emphasis on management and IT support of logistics processes. To equip the student with knowledge of the strategic platforms business in the information age, business transformation planning and implementation of changes to business models and business processes. To present the design aspects of business logistics, management, optimization and computerization.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Definition of business logistics and logistics business processes 2. Logistics as the enabler of internationalization 3. Strategic directions and innovative business models in the age of digitalization. 4. Management of business logistics 5. Supply and cooperation in supply chains, strategy ECR - Efficient Consumer Response 6. Financial aspects of business logistics 7. Logistics management in case of outsourcing (3PL, 4PL) 8. Application of Stakeholder Theory in Logistics 9. Metrics of efficient and effective management of logistics systems; indicators of effectiveness and efficiency of business logistics 				

Business Process Management

Course level	MASTER				
Course code	196964				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Mojca Indihar Štemberger (mojca.stemberger@ef.uni-lj.si)				
Prerequisites	The course is suitable for all master students of business.				
Course objectives and competences	Objective of this course is to give the students knowledge about different contemporary approaches to business process management. The focus is on the business aspects and practical application.				
Intended learning outcomes	Upon completion of this course, students will be able to understand why BPM is important, when and how organization should use it, to understand critical success factors and to select and use process improvement methods and tools.				
Content <i>(Syllabus outline)</i>	<ol style="list-style-type: none"> 1. Introduction to digital transformation and BPM 2. Identifying and modelling business processes 3. Analysing business processes 4. Business process change 5. Continuous process improvement methods 6. BPM deployment through ERP systems 7. BPM deployment through BPM suites 8. Setting-up a process support organization 9. Managing and measuring business processes 10. Change management 11. BPM and organizational culture 12. Reference models 				

Comparative Analysis of Economic and Business Systems

Course level	MASTER				
Course code	196513				
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Aleksandar Kešeljević (saso.keseljovic@ef.uni-lj.si) Bogomir Kovač (bogomir.kovac@ef.uni-lj.si)				
Prerequisites	-				
Course objectives and competences	To develop knowledge of economic systems. To thoroughly understand the characteristics of different fundamental economic systems in a market economy, state-controlled economy, and mixedeconomy. To thoroughly understand the terms of market economy and stateregulation, market failures and government intervention failures. Comparison of the fundamental institutional systems of the USA, EU, Japan, and China. Through understanding of the principles of economic and business systems, the students will develop the ability to describe and examine the systems and to conduct a comparative analysis. The students will be able to not only understand the basic concepts of economic and business systems, but also to logically formulate the position and to choose the methods to describe and resolve such position, as well as to verify these methods. They will be able to determine how a specific practical problem could be resolved.</p> <p>Theoretical discoveries introduce into the discipline the consideration of practical application of the analysis of economic and business systems and render possible critical findings about the use of the theories examined. The students shall develop the skills of employing local and international literature and other sources from the relevant field; they shall learn how to gather and interpret data, to use different procedures and methods, to report (orally and in writing), to identify and resolve problems, to critically analyze the problems; and they shall learn about the techniques and skills of writing reports and reflections regarding the literature they have read.</p>				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Definitions and classification of economic systems. 2. Determination of economic systems and their changes. 3. Alternative economic systems. Christian and islamic economic system. 4. Market economic system. Economic history of market. Theory of capitalist economic system. 5. Capitalism and socialism as economic system in XX.th century. Theory of market socialism. 6. Three capitalism in EU (French, Swedish, and German economy). 7. Economic consequences of the EU. USA and anglo-saxon capitalist system. Comparative analysis. 8. Japan economic system. Asian model (Taiwan, Singapore, South Korea) 9. China economic system and Asian miracle. 10. Reform of Russian Economy. 11. Process and economics of transitions. 				

Postcommunist transition.

Transition of social market economy (third way)

12. Business systems and different business culture.

13. European business systems – comparative analysis.

14. Convergence and divergence of economic, political and cultural systems.

New world order.

Consumer Behaviour in Global Environment

Course level	MASTER				
Course code	196839				
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Irena Vida (irena.vida@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Mastering a conceptual framework and tools for analysis of local, regional and global consumers and the competence of applying these to marketing in hypercompetitive global environments. Understanding of pre- and post-purchase consumer behavior in culturally, socially and economically diverse markets. Competence for marketing planning and implementation in the context of diverse stakeholders operating in the multi-cultural and global environment.				
Intended learning outcomes	Gaining the understanding of the role of the globalized world markets on consumer behavior and comprehension of similarities and differences in individual and group responses to marketing stimuli in social environments characterized by idiosyncratic cultures. New knowledge gained in the course relates to the insights into consumer theory, consumer models in global and culturally dynamic business environment as well as application of this knowledge to marketing practice. Students will apply theoretical knowledge to practical examples (case studies, tutorials, in-class activities), and develop an in-depth analysis of a group of consumers in a specific socio-cultural market of their choice. In course, students will gain an appreciation of the complexity of operating in the global marketplace and develop critical thinking ability and problem-solving skills through experiential learning. Moreover, they will develop critical and creative thinking skills free of bias and stereotypes for managerial decision-making in culturally diverse business environments. Students will also learn to identify and utilize information and literature sources to further broaden understanding of consumer behavior and marketing practices in culturally dynamic global environment.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Understanding consumers in the global context: <i>Implications for profit and non profit sectors</i> 2. Environmental factors and customer behavior: <i>Implications for final consumer and business markets</i> 3. Customer behavior models: <i>Application for local, regional and global markets</i> 4. Consumer research and analyses in global cross-cultural context 5. Global customers and marketing strategy relationship 				

Corporate Finance 2

Course level	MASTER				
Course code	196602				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	45	135
Teaching Staff	Dušan Mramor (dusan.mramor@ef.uni-lj.si) Matjaž Črnigoj (matjaz.crnigoj@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	The course is an intensive intermediate level corporate finance course. It is designed to first deepen the knowledge of financial fundamentals. Knowledge is then advanced in main strategic financial and investment decisions (capital budgeting, capital structure, and mergers and acquisitions) and respective operating decisions. The third part of the course builds on analytical models and the logic learned in the first two parts. It is devoted to developing the necessary application skills for problem solving of current issues presented in the financial press.				
Intended learning outcomes	In-depth knowledge of core and advanced corporate finance topics.				
Content (Syllabus outline)	- Preparatory: Time value of money; Valuing Bonds; Valuing Stocks; Corporation and Corporate Governance; Estimating Cost of Capital - Core: Law of One Price and Financial Decision Making; Capital Markets and the Pricing of Risk; Optimal Portfolio Choice and the Capital Asset Pricing Model; Investor Behaviour and Capital Market Efficiency; Financial Distress, Managerial Incentives, and Information; Capital Budgeting and Valuation with Leverage; Financial Options; Option Valuation; Real Options; Raising Equity Capital; Debt Financing; Leasing; Mergers and Acquisitions.				

Corporate Social Responsibility

Course level	MASTER				
Course code	196172				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	-	-	45	135
Teaching Staff	Adriana Rejc Buhovac (adriana.rejc.buhovac@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Students develop the ability to act in socially and environmentally responsible way and display sustainable business decision-making. They demonstrate understanding of critical issues and current developments in corporate social responsibility (sustainability). Students develop capabilities necessary for the development of sustainable strategies and their successful implementation.				
Intended learning outcomes	<ul style="list-style-type: none"> - Knowledge of critical corporate social responsibility issues and current developments in this field. - Application of sustainability strategy development knowledge and skills. - Application of sustainability strategy implementation knowledge and skills. 				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Introduction to corporate social responsibility and corporate sustainability <ul style="list-style-type: none"> - Key concepts, trends, issues and theoretical schools 2. The Corporate Sustainability Model <ul style="list-style-type: none"> - A tool to plan, execute and control sustainability strategies and sustainability projects for achieving greater social, environmental and economic impacts. 3. Workshops: Developing sustainability projects for real-life organization with social, environmental and economic impacts. <ul style="list-style-type: none"> - <i>Identification of sustainability issues, challenges</i> - <i>Proposal of sustainability project to resolve social, environmental and economic issues</i> - <i>Development of purpose and goals</i> - <i>Development of program logic models and causal linkage models</i> - <i>Development of key KPIs for measurement and reporting</i> - <i>Proposal of methodology to measure social, environmental and economic impacts.</i> 4. Capital investments and the integration of sustainability risks into investment decisions 5. Costing, capital investments, and the integration of social risk 6. Developing and implementing social, environmental, and economic impact measurement systems 7. Aligning reward systems 8. External corporate social responsibility reporting and verification 				

Developing Software Solutions

Course level	MASTER				
Course code	196522				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	42	-	-	33	135
Teaching Staff	Tomaž Turk (tomaz.turk@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Students will develop competences in: basic components of information systems development; development concepts in .NET; service oriented solutions in Oracle JDeveloper; modern software architectures.				
Intended learning outcomes	Understanding concepts of modern software development for business environments.				
Content <i>(Syllabus outline)</i>	<ol style="list-style-type: none"> 1. Basic components of information systems development 2. Development frameworks' concepts (in ASP.NET) 3. Object oriented programming, modularity 4. Declarative programming 5. Service oriented solutions (in Oracle JDeveloper) 				

Economic Growth and Development

Course level	MASTER				
Course code	TBD				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Tjaša Redek (tjasa.redek@ef.uni-lj.si)				
Prerequisites	Prior knowledge of Macroeconomics.				
Course objectives and competences	Theoretical and analytical instruments to understand and to analyse the growth processes and to read a relevant literature. A combination of subjects of economic growth and economic development.				
Intended learning outcomes	Knowledge and understanding: to understand and analyse processes of economic growth and development. To be able to advise on the subject of growth policy and strategy of development. Theoretical, analytical and applied knowledge on the subject.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Stylized facts on growth and development 2. Neoclassical growth models - basics: Solow and AK 3. Neoclassical growth models - basics: Ramsey model 4. Endogenous growth theory: Technology change 5. Endogenous growth theory: Technology transfer and catch-up 6. Population and human capital and economic growth 7. Technology, tangible and intangible capital and growth 8. Trade, FDI and economic growth 9. Structural change and growth 10. Financial development and growth 11. The problems of non-balanced growth 12. Political economy and growth. Institutions and growth 13. Political economy and growth. Sustainable development. 14. The development problems: Putting it all together 				

Financial Accounting 2

Course level	MASTER				
Course code	196589				
ECTS credits	7				
	Lectures 45	Seminar 30	Tutorial -	Other type of learning 15	Individual work 120
Teaching Staff	Sergeja Slapničar (sergeja.slapnicar@ef.uni-lj.si) Aljoša Valentincič (aljosa.valentincic@ef.uni-lj.si)				
Prerequisites	Basic knowledge of accounting and finance.				
Course objectives and competences	- Competences of measuring financial instruments - Preparation of consolidated accounts - Knowledge of deferred taxes - Understanding of earnings management - Ethical behavior in accounting				
Intended learning outcomes	The purpose of the course is to upgrade the knowledge of accounting from the undergraduate level with more complex topics such as consolidation of an international group, equity method for associate companies, deeper understanding of financial instruments issues, hedging, deferred taxes. The students will acquire understanding of the underlaying causes of discretion in financial reporting to achieve certain goals. Often, managers will try to achieve higher earnings than the year before, they will avoid losses and will try to meet or beat analysts' forecasts. The course is designed for future accountants in large companies, auditors, tax advisors, appraisers, controllers, financial managers and those who will be employed in financial institutions on various functions.				
Content <i>(Syllabus outline)</i>	1. Classification and measurement of financial instruments 2. Concept of fair value 3. Hierarchy of fair value measurement 4. Valuation models 5. Concept of valuation at amortized costs 6. Impairment of financial instruments 7. Derivatives 8. Hedging 9. Equity method 10. Comprehensive income statement 11. Acquisition method 12. Consolidation 13. Deferred taxes 14. Discretion in financial reporting 15. Earnings management 16. Capital markets and accounting 17. Ethics in accounting				

Information Systems Management

Course level	MASTER				
Course code	196264				
ECTS credits	7				
	Lectures 45	Seminar 30	Tutorial -	Other type of learning 15	Individual work 120
Teaching Staff	Miro Gradišar (miro.gradisar@ef.uni-lj.si) Mojca Indihar Štemberger (mojca.stemberger@ef.uni-lj.si) Tomaž Turk (tomaz.turk@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Introduce students to modern methods of management of information resources. Present the trends in information technology and highlight the most promising areas of IT implementation. Make students ready to guide the development of information systems in the company to be in line with company business plans and also to participate in the business planning so that the opportunities offered by the rapid development of IT are used.				
Intended learning outcomes	To know the trends in information technology and thereby to identify new ways of IT use in the business environment. To understand the role of the information systems department and co-operation between users and managers and to understand economics of IT and methods of information systems development. Students will analyze existing information systems in the organization to identify their strengths and weaknesses and to introduce new solutions that are aligned with business goals and IT trends. To encourage students to a deeper reflection on the impact of the IT trends on the business processes of the organization and it's communication with the business environment. By preparing seminar paper students will refine skills of gathering domestic and foreign literature.				
Content (Syllabus outline)	1. Digitalization and IT Business Value 2. IT Governance 3. Standards and frameworks for implementing IT governance 4. Outsourcing 5. Cloud computing 6. Legal issues of ISM 7. Enterprise Architecture 8. Cost Benefits Analysis 9. Assessment of development costs 10. Acquiring and Developing Business Applications and Infrastructure 11. IT Project management 12. Benefits management 13. IS security				

Internal Logistics

Course level	MASTER				
Course code	196472				
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Marko Jakšič (marko.jaksic@ef.uni-lj.si)				
Prerequisites	Fundamentals of business logistics and operations management, which students acquire in the courses of the program previously implemented business logistics.				
Course objectives and competences	The course builds on the basics of business logistics and production management. It present the student advanced concepts of material flow management in companies, this is the flow of products from the input storage through the manufacturing process, to dispatchment into the distribution network. To teach students to identify problems related to internal processes to ensure the effectiveness of the processes within internal logistics and analysis thereof. Consequently, predicting possible outcomes, finding solutions, and finally choosing the appropriate business decisions to pursue the chosen goals of business and manufacturing strategies. Deep understanding of business models and concepts.				
Intended learning outcomes	Upon completion of this course, the student should be able to measure the effectiveness, identify likely areas for improvement, develop and implement improved planning and control methods for production systems. The course provides an understanding of important concepts of modern business models, processes and trends. Level of knowledge gained and work on practical business cases ensure that the students get acquainted with the challenges in practice, and effectively use the knowledge to analyze the real life problems.				
Content (Syllabus outline)	<p>The course deals with analysis, planning and management of internal logistics in manufacturing and service systems. First, building on the basic analysis of the dynamics of production systems, where the emphasis is on developing the productivity criteria, analysis of productivity and the impact of uncertainty. Later on, following the traditional hierarchical structure of production planning in business, with the capacity planning of production facilities and manpower planning, managing inventories and scheduling of manufacturing operations (MRP, "push-pull" principle), and learning about modern approaches to production in the form of JIT, Kanban. Content is strongly related to demand forecasting, basic stock control and logistics.</p> <ol style="list-style-type: none"> 1. Process management and company strategy 2. Process flow analysis (Value Stream Mapping) 3. Management of process variability and uncertainty 4. Production in production batches 5. Simulation of the production process with the concept of continuous improvement 6. Development of production systems: from MRP, through JIT to lean production 7. Push and pull production systems and planning differences 				

International Business Environment

Course level	MASTER				
Course code	196601				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Maja Zalaznik (maja.zalaznik@ef.uni-lj.si) Tamara Pavasović Trošt (tamara.trost@ef.uni-lj.si)				
Prerequisites	Prior knowledge of international business is recommended.				
Course objectives and competences	To understand the complexity and multidimensionality of the international environment, as well as its cause and effect relations from the viewpoint of international business. To understand implications and business issues related to both the impact of “global” and “local” forces on international companies and organizations. To analyse international/local environments, industries, markets and consumers to support international business decision making. To develop and apply “glocal” mindset in business decision making. To understand sustainability dilemmas in international business. To understand various aspects of corporate social responsibility in international business. To understand the role of NGOs in international business. To identify and assess global/local trends and their impact/relevance for international business.				
Intended learning outcomes	Development of so-called glocal mindset and cosmopolitanism. Understanding of international environment complexity and its impact on markets, industries, companies/organizations and individuals. Adaptation of international business strategies to global/local trends. Identification and adaptation of international business strategies to sustainability dilemmas and issues related to corporate social responsibility. Understanding the role of NGOs in the context of international business.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Global trends and their impact on global, international, regional and/or local markets, industries and companies 2. Tools, sources and approaches for analysing global, international, regional and local markets, industries and consumers 3. Contextual richness implications on global, international, regional and local business (for companies and organizations) 4. Skills, capabilities and resources for acting glocally 5. International business and environmental regulations 6. Varieties of capitalism across markets 7. Corporate social responsibility across markets 8. The role of NGOs in global, international, regional and local markets 				

International Business Logistics

Course level	MASTER				
Course code	196100				
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Jože Damijan (joze.damijan@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	The purpose of the course is to equip students with a lot of useful knowledge and practical tools that they will need in their future work in the logistics industry.				
Intended learning outcomes	The course offers students a comprehensive insight into the international logistics environment, both in the global and national context. The aim of the course is to present practical insights into the operation and organization of stakeholders in the global logistics. The course will be mainly practical in nature with lots of real examples and from the world of logistics.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Who's who in global logistics – Stakeholders presentation 2. Who's who in global logistics – The role and importance of stakeholders in the global context 3. Ports, shipping companies and shipping agents 4. Airports, airlines and airline agents 5. Road transport operators, railways, railway operators 6. Logistics companies, 3PL and 4PL providers 7. Documents in international logistics: Incoterms clauses, insurance, customs and tax legislation 8. Examples from practice 9. Problems and solutions in practice 				

International Business, Societies and Cultures

Course level	MASTER				
Course code	196644				
ECTS credits	7				
	Lectures 45	Seminar 30	Tutorial -	Other type of learning 15	Individual work 120
Teaching Staff	Tamara Pavasović Trošt (tamara.trost@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Familiarize students with interdisciplinary scholarship on markets in a global business environment, including the fields of sociology, cultural studies, communication, and economics. Provide students an opportunity to consider the usefulness of culture as a lens for studying markets and organizations, and a sociological toolkit for understanding the global economy. Help build students' glocal (global + local) mindset and increase awareness of the global and local contexts within which markets, consumers and institutions operate.				
Intended learning outcomes	Knowledge and understanding of: How the mechanisms and processes of the interaction and interrelationship between business and society work; The social construction of markets, institutions, organizations, and consumer identity; The social aspects and implications of international business, and the impact of culture and social structure on market outcomes; How international markets and societies co-exist, and how they structure relationships; The implications of the changing global landscape on international business; Challenges in managing international business-government relations.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Course introduction 2. Basic sociological tools and concepts for understanding markets, institutions and organizations in the global economy 3. Culture and consumption, markets, and prices 4. Contextualizing international business activities: Groups and social identity, embeddedness, social networks, social capital 5. Institutions, organizations and culture/society 6. Impact of global trends on business: Climate change and sustainable development, demographics changes, migration patterns, inequality 7. Managing international business-society relations 8. Social responsibility, markets and social justice, ethics and values in diverse business environments 9. Understanding global economic events in social terms: Globalization and securitization, 2008 world financial crisis and its aftermath, global resistance movements (e.g. Occupy Wall Street) 10. Student presentations 				

International Competitiveness: Concepts and Analytical Approaches

Course level	MASTER				
Course code	196001				
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Jože Damijan (joze.damijan@ef.uni-lj.si) Maja Zalaznik (maja.zalaznik@ef.uni-lj.si)				
Prerequisites	Basic knowledge of international business/international economy and statistics.				
Course objectives and competences	Develop knowledge about different concepts, modes and evaluations of competitiveness at firm, industry and country level. Develop competences of competition and comparative advantages analysis at different levels of measurement. Develop competences of critical thinking and creative upgrading of existing models and concepts of competitiveness. Develop knowledge about relations between competitiveness and firm performance in international markets. Develop competences and skills of team work, individual research work and presentations. Develop competences of data collection and usage of existing sources, analytical tools and methods of research (seminar/project work) Students will also develop competences of: critical evaluations of theory and practice and their relation; how to use domestic and foreign literature, how to collect, interpret and summarize the data; reporting: case analysis, seminar/project preparation and presentation; team work; critical analysis, synthesis and problem solving; critical thinking.				
Intended learning outcomes	Knowledge about different concepts of measurement, modelling and evaluations of competitiveness at the level of firm, industry, country. Understanding of competitive and comparative analysis at different levels of measurement. Knowledge of analytical methods - how to use the existing knowledge about competitiveness. Knowledge about relationship between competitiveness and performance on international markets.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Meaning of competition, competitiveness, competitive and comparative advantages in international/global markets 2. Competition in economic and international economics theory 3. Crucial methods of competitiveness measurement 4. Methodological approaches of international competitiveness measurement - Firm, industry, macro level 5. Development of competitiveness factors at the level of firm and its influence on international competitiveness of country 6. New theories of competitiveness measurement 7. Competitiveness and business performance in a globalized world 				

International Finance 2

Course level	MASTER				
Course code	TBD				
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Mojmir Mrak (mojmir.mrak@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To deepen knowledge of the course participants in the area of international finance. To acquaint course participants with new concepts and theories in the area of international finance, basic problems and current trends in this area. To provide course participants with the tools for using theoretical knowledge in the area of international finance for addressing practical problems in this area.				
Intended learning outcomes	Understanding of major type of financial crises: currency crises, banking crises, balance of payment crisis as well as of main models of financial crises assessment. Understanding of key »internal« drivers of financial crisis development: linkages among public finances, balance of payments, exchange rates, financial sector stability. Understanding of key »external« drivers of financial crisis development: external shocks, contagion, market expectations, etc. Understanding of the institutional environment for managing financial crises: London club, Paris club, role of the International Monetary Fund, bond restructuring. Understanding capital flows: volume and structure; role of official and private flows. Understanding project finance.				
Content (Syllabus outline)	1. Financial crises and the new international financial order 1.1. Emerging countries external debt and alternatives for their solutions 1.2. Main patterns of financial crises in emerging economies 1.3. Key elements of the new international finance order - role of the International Monetary Fund, restructuring of bank debts and bonds 2. Specific risks in international finance and their management 2.1. Exchange rate risks 2.2. Country risk 3. International capital flows 3.1. Definition, relationship with national accounts and classification 3.2. Official sources of capital - <i>multilateral finance institutions, ODA, export credits</i> 3.3. Private sources of equity and debt financing 3.4. Private public partnerships and project finance				

IT Project Management

Course level	MASTER				
Course code	196633				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	42	-	-	33	135
Teaching Staff	Talib Damij (talib.damij@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	The course is intended for all students who want to deepen knowledge in the field of IT project management. In recent time IT project management becomes one of the most interested fields. IT projects represent expensive investments for the company and include high level of risk, which may cause money and time losses for the customer. Students will be acquainted with IT project management that enable successful management and completion of projects. The main objective of this course is to create successful future project managers.				
Intended learning outcomes	In this course students learn about IT project management traditional and agile methodologies, such as PMBOK, Scrum and Kanban. Understanding these methods is essential for successful management of various IT projects. Knowing the traditional project management phases of initiation, planning, execution, controlling and closing will enable students involvement in reality. Students will also use contemporary tools in order to manage IT projects.				
Content (Syllabus outline)	1 Agile project management 2 Scrum method 2.1 Scrum artifacts 2.2 Scrum team-roles 2.3 Scrum planning 2.4 Scrum sprinting 2.5 Scrum review 2.6 Scrum retrospective 3 Kanban 3.1 Visualize 3.2 WIP Limits 3.3 Management flow 3.4 Make policies explicit 3.5 Implement feedback loops				

Logistic Optimization

Course level	MASTER				
Course code	196480				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Liljana Ferbar Tratar (liljana.ferbar@ef.uni-lj.si) Peter Trkman (peter.trkman@ef.uni-lj.si)				
Prerequisites	-				
Course objectives and competences	Supplement students' knowledge in the areas of risk management, inventory, coordination schemes.				
Intended learning outcomes	To train students to be able to understand the models and simulations that illustrate the dynamics of flow in the supply system and that they themselves are able to develop a simple optimization models. Train students for independent learning / understanding of logistics concepts and increase their capacity for the application of practical examples. This course complements the course "Optimal management of logistics systems".				
Content (Syllabus outline)	1. e-Procurement 2. Management inventories (JIT, EOQ ...) 3. Reward alignment in supply chains 4. Risks in logistics/supply chains 5. New modes of integration (e-clusters, alliances) 6. Modelling, optimization and simulation (tasks in Excel, simulation games) 7. Management and optimization of transport 8. Case studies				

Managerial Economics

Course level	MASTER				
Course code	196609				
ECTS credits	7				
	Lectures 45	Seminar 45	Tutorial -	Other type of learning 30	Individual work 90
Teaching Staff	Polona Domadenik (polona.domadenik@ef.uni-lj.si) Nevenka Hrovatin (nevenka.hrovatin@ef.uni-lj.si) Matjaž Koman (matjaz.koman@ef.uni-lj.si)				
Prerequisites	Students need to master the material of Microeconomics 1.				
Course objectives and competences	This course emphasizes the synthesis of economic theory, decision sciences, and the various fields of business administration studies. It examines how they interact with one another as the firm attempts to reach optimal managerial decisions in the face of constraints. A special emphasis will be made on how managerial decisions are actually made in the real world. The course will increase the effectiveness of decision making by expanding and sharpening the analytical framework used by managers to make decisions.				
Intended learning outcomes	Students will be able to apply economic principles to managerial decision making. They will learn to consider the influence of economic forces in making decisions and in understanding the consequences of those decisions. In any problem-solving challenge, the decision-maker must balance the usefulness of the solution (for example, the power and credibility of insight) with the tractability of the approach (that is, the analysis must be completed within time and resource constraints). The course is heavily based on an analysis of business cases where teacher guides the student through the solution in a variety of business situations through microeconomic models. Students will use the gained knowledge in analyzing business cases studies, where she will applied the theoretical principles to solving business cases. Subject to compliance with set tasks and obligations student will develop analytical thinking skills and creative teamwork. The student will draw on knowledge of the subject from the extensive collection of domestic and foreign scientific contributions. Student will also use mathematical and statistical tools to solve economic problems. Students will develop the skills and competencies of collecting, interpreting, and graphical representations of data.				
Content (Syllabus outline)	1. Theory of demand. 1.1. Classical theory of demand. 1.2. Theory of demand that is based on product characteristics. 1.3. Demand estimation and demand forecasting. 1.4. Business case-Metabical. 2. Production and costs. 2.1. Cost advantages. 2.2. Optimization and supply of the firm. 2.3. Costs analysis for business decisions. 2.4. Business case – Outsourcing opportunities for small businesses: A quantitative analysis. 3. Internal organisation. 3.1. Behavior of firms and their goals. 3.2. Cases-Behavior of firms in countries of former Yugoslavia and Albania 3.3. Markets of asymmetric information. 4. Vertical boundaries of the firm. 4.1. The firm in a vertical chain. 4.2. Costs and benefits of vertical integration. 4.3. Model of vertical integration. 4.4. Business case - Nucleon.				

5. Diversification.

- 5.1. Measures and reasons of diversification.
- 5.2. Strategic styles of diversified firm.
- 5.3. Business case-Kolektor.
- 5.4. Business case-Martifer.

6. Market structures.

- 6.1. Entry and exit.
- 6.2. Business case - Ryanair.
- 6.3. Strategic commitment and game theory.

7. Dynamic pricing policy.

- 7.1. Business case – Cartel in Turku area?

8. Price discrimination.

9. Strategic positioning and comparative advantages.

- 9.1. Comparative advantage.
- 9.2. Strategic positioning.
- 9.3. Sustaining comparative advantage.
- 9.4. Business case – Apple

10. Industrial policy

Microeconomics 3

Course level	MASTER				
Course code	196610				
ECTS credits	7				
	Lectures 45	Seminar 45	Tutorial -	Other type of learning 30	Individual work 90
Teaching Staff	Aljoša Feldin (aljosa.feldin@ef.uni-lj.si) Jelena Zorić (jelena.zoric@ef.uni-lj.si)				
Prerequisites	Knowledge of intermediate microeconomics is required.				
Course objectives and competences	To acquaint students with the advanced microeconomics. To provide students with the knowledge about the topics that are necessary for other disciplines which are related to the advanced level microeconomics.				
Intended learning outcomes	Students will receive conceptual basis and the necessary tools for understanding contemporary advanced microeconomics. They will be able to structure the microeconomic problems. The standard microeconomic models will be supplemented with the deviations from these models that are result of strategic behavior of economic agents, bounded rationality, externalities and asymmetric information. With such theoretical knowledge and the use of analytical tools students will be able to answer to the most difficult microeconomic questions, related to the theory of economic organization, welfare economics, labor economics and health economics. The topics of the course and the analytical methodological approach motivate students to solve theoretical as well as practical microeconomic problems by themselves. Students will also develop the following skills: the use of Slovenian and foreign literature, identification of the problem and its solving with the use of mathematical tools, interpretation and presentation of analytical findings both orally and in writing.				
Content (<i>Syllabus outline</i>)	1. Consumer theory 1.1. Preferences and utility 1.2. The Consumer's Problem 1.3. Indirect utility and expenditure functions 1.4. Properties of consumer demand 1.5. Empirical aspects of demand estimation 2. Choice and uncertainty 2.1. Uncertainty and risk 2.2. Von Neumann-Morgenstern utility function 2.3. Risk aversion 2.4. Practical cases from health economics 3. Production theory 3.1. Production functions 3.2. Cost functions 3.3. Duality in production 3.4. Efficiency analysis with SFA and COLS parametric methods 4. Economics of information 4.1. Moral hazard and adverse selection 4.2. Principal agent models 4.3. Symmetric/asymmetric information 5. Vertical integration and transfer pricing 5.1. Types of vertical integration 5.2. Transfer pricing problem 6. Welfare economics 6.1. 1st and 2nd fundamental theorem of welfare economics				

- 6.2. Social welfare functions
- 6.3. Arrow's impossibility's theorem
- 6.4. Sen's theorem of the impossibility of Paretian Liberal
- 7. Externalities and public goods**
- 7.1. Efficiency and externalities
- 7.2. Pigouvian tax
- 7.3. Coase theorem
- 7.4. Public goods

Monetary Economics 2

Course level	MASTER				
Course code	196951				
ECTS credits	7				
	Lectures 45	Seminar 30	Tutorial -	Other type of learning 15	Individual work 120
Teaching Staff	Boštjan Jazbec (bostjan.jazbec@ef.uni-lj.si) Igor Masten (igor.masten@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Synthetically present the theory of monetary economics and monetary policy based on Neo-Keynesian models of nominal and real rigidities in economy. Familiarize graduate students with the advanced methodological tools. First, the basic canonic transcription of the closed economy model will be derived, followed by its amplification to the open economy, and finally the basic empiric applications and potential model expansions. The basic emphasis will be on the new approach to studying monetary policy, which achieves price stability through the control of interest rates following the Neo-Wicksellian approach. Students learn the basic methods for solving linear stochastic forward-looking models using Dynare. In the empirical part of the course we introduce vector autoregressions as one of the basic tools of macroeconomic analysis. The methodology is extended to panel framework. The econometric methods are applied to current macroeconomic issues. In econometric analysis we make use of JMulTi and Stata.				
Intended learning outcomes	TBD				
Content <i>(Syllabus outline)</i>	1. Monopolistic competition and aggregate demand 1.1 Consumption basket and price indexes 1.2 Household optimization problem 1.3 Expectations augmented IS curve 1.4 Trade balance and complete markets 2. Nominal rigidities and the New-Keynesian Phillips curve 3. Log-linearization & model solution methods for dynamic stochastic models 4. Rational expectations equilibrium and VAR representation 5. Monetary policy in the closed economy 5.1 Taylor rule and Taylor principle 5.2 Inflation targeting in closed economy 5.3 Optimal monetary policy: discretion and commitment 6. Determinacy in a cashless economy 7. Open economy model 7.1 Interest rate and exchange rate channel 7.2 Open economy inflation targeting 7.3 Fixed exchange rate regime 7.4 Real exchange rate targeting 8. Empirical applications

	45	30	-	15	120
Teaching Staff	Damjana Kokol Bukovšek (damjana.kokol.bukovsek@ef.uni-lj.si)				
Prerequisites	Knowledge of basic calculus (functions of one variable, derivative and applications, integral, matrices, systems of linear equations, probability theory).				
Course objectives and competences	Introduction to mathematical concepts and methods needed to pursue economic analysis, in particular, to optimization methods.				
Intended learning outcomes	The student deepens the knowledge of mathematical analysis, linear algebra and probability theory and is introduced to optimization methods, which are especially suitable at the mathematical formalization in economics. The acquired knowledge enables comprehension and use of the optimization theory in setting up mathematical models of various economic problems.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Dynamic programming 2. Functions of several variables, continuity, limit, partial derivatives 3. Differential, Taylor's formula 4. Implicit functions, linearization, log-linearization 5. Gradient, extrema, convexity, quadratic forms 6. Constrained extrema, Lagrange method, envelope theorem, Kuhn-Tucker conditions 7. Vector spaces, linear mappings, eigenvectors, matrix decompositions 8. Differential equations, systems of linear differential equations, stability 9. Difference equations, systems of linear difference equations, stability 10. Probability, random variables, moments, limit theorems, random vectors 				

Organization and Management

Course level	MASTER				
Course code	196599				
ECTS credits	7				
	Lectures 45	Seminar 45	Tutorial -	Other type of learning 30	Individual work 90
Teaching Staff	Vlado Dimovski (vlado.dimovski@ef.uni-lj.si) Matej Lahovnik (matej.lahovnik@ef.uni-lj.si)				
Prerequisites	Prior knowledge of the fundamentals of organization and management.				
Course objectives and competences	Objectives of the course are to develop and upgrade the knowledge on contemporary concepts of management and organization to be able to: respond to challenges of the global environment and manage diversity and change; respond to ethical challenges, corporate social responsibility and sustainable development; understand the complexity of decision making process in organization; understand contemporary organization theories, organizational structures and processes; recognize influences on organization and organization design; understand corporate governance in its relationship to management; understand forms of inter-organizational alliances.				
Intended learning outcomes	The course is building the understanding and knowledge of fundamental organizational and managerial concepts and of organizational structures and processes in place for assuring the purposeful execution of business processes. It creates an understanding of several organizational phenomena in related fields, like supply chain management, customer relationship management. Applicability of knowledge is in all aspects of managerial work and support functions. The knowledge is built on the principle of combining theory and practice. Students develop analytical skills, capabilities of implementation of planed activities and organization as well as social skills.				
Content <i>(Syllabus outline)</i>	1. Fundamentals of management 2. Management in a global environment 3. Managing ethics and social responsibility 4. Managerial decision-making 5. Managing change and innovation 6. Managing diversity and multicultural management 7. Theories of organization and types of organization 8. Fundamentals of organization, organizational structures 9. Basic organizational relationships 10. Corporate governance 11. Organizational environment 12. Inter-organizational relationships, networks 13. Characteristics of modern organizations				

Political Economy

Course level	MASTER				
Course code	196600				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Andrej Sušjan (andrej.susjan@ef.uni-lj.si)				
Prerequisites	Basic knowledge of micro and macro-economics.				
Course objectives and competences	Introduction to the institutionalist analysis of contemporary economies. Laying emphasis on problems of sustainable growth and development. Critical comparative assessment of different macroeconomic schools and of their proposals for economic policies and developmental strategies.				
Intended learning outcomes	Understanding the differences between political economy and economics. Performing economic analysis within a broader social and institutional context. Focusing economic analysis on long-term aspects of sustainable growth.				
Content <i>(Syllabus outline)</i>	<ol style="list-style-type: none"> 1. Definition of political economy 2. Paradigmatic differences between orthodox and heterodox economic theories 3. Evolution of political economy – an overview 4. Main features of classical political economy 5. Contemporary political economy – main themes 6. Evolution of the theory of economic growth 7. Growth and distribution. Income inequality 8. The role of institutions in economic development 9. Globalization and climate changes 10. Macroeconomic schools 11. Neoliberalism and Keynesianism 12. Post-Keynesian economics 13. Institutional approach to economic analysis 14. New Institutional Economics 				

Pricing Strategies

Course level	MASTER				
Course code					
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Mateja Bodlaj				
Prerequisites	–				
Course objectives and competences	To deepen understanding about the importance of pricing for a business performance. To deepen understanding about factors influencing pricing decisions. To show alternative pricing strategies. To develop understanding why a proactive, strategic approach to pricing is better than a purely reactive and tactical approach.				
Intended learning outcomes	<ul style="list-style-type: none"> - Understanding the complexity of pricing and acquiring basic analytical knowledge and capabilities for pricing decisions in competitive marketing environment. - Understanding the importance of strategic approach to pricing and knowledge about possible pricing strategies in various contexts. - Ability to apply theoretical knowledge to practical examples in the field of pricing strategies and developing capabilities for teamwork. 				
Content (Syllabus outline)	<p>1. Setting the price</p> <p>1.1. Boundaries of a good price</p> <p>1.2. Profit's sensitivity to price</p> <p>1.3. Consumer perception-driven pricing</p> <p>1.4. Price to value</p> <p>1.5. Psychological influences to price sensitivity</p> <p>2. Managing price variances</p> <p>2.1. Price segmentation</p> <p>2.2. Price promotions</p> <p>2.3. Discount management</p> <p>3. Establishing price structures</p> <p>3.1. Price structure and multipart tariffs</p> <p>3.2. Add-ons, accessories and complementary products</p> <p>3.3. Versioning</p> <p>3.4. Bundling</p> <p>3.5. Subscriptions and customer lifetime value</p> <p>3.6. Yield management</p> <p>4. Pricing strategy</p> <p>4.1. Competition and pricing</p> <p>4.2. Product life cycle pricing</p> <p>4.3. Pricing decisions, ethics and the law</p>				

Purchasing Management

Course level	MASTER				
Course code	196430				
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Vlado Dimovski (vlado.dimovski@ef.uni-lj.si) Marko Jakšič (marko.jaksic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<p>1. The course builds on the basics of business logistics and production management. It present the student advanced purchasing and procurement concepts in companies, related to structuring the purchasing processes within a company, as well as across the supply chain.</p> <p>2. To teach students to identify problems related to ensuring the efficient purchasing, integration of purchasing inline with the company's business strategy and within the scope of activities related to supply of products and services.</p> <p>3. Deep understanding of business models and concepts related to purchasing based on the analysis of multidisciplinary business case studies.</p>				
Intended learning outcomes	The course provides an understanding of important concepts of modern business models, processes and trends. Level of knowledge gained and work on practical business cases ensure that the students get acquainted with the challenges in practice, and effectively use the knowledge to analyze the real life problems.				
Content (Syllabus outline)	<p>General content:</p> <ol style="list-style-type: none"> 1. Introduction to purchasing management (the role of purchasing and procurement, purchasing process definition, and the importance of purchasing on the firm's profitability) 2. How global trends shape Purchasing. 3. Purchasing behavior of firms (differences between B2C and B2B, purchasing process, the types of purchasing goods and services, the role of purchasing department) 4. Decision making within purchasing: the steps of the purchasing process 5. Negotiation, communication, and (soft) skills of Purchasing Managers 6. Purchasing Organization (factors influencing the organizational structure of purchasing, centralized/decentralized purchasing, interfunctional purchasing responsibility, cooperation and integration of purchasing ...) 7. Purchasing 4.0: Digital Transformation of the Purchasing process and IT tools in Purchasing 8. Purchasing and sustainability 9. Supplier Relationship Management <p>Methodology, technics:</p> <ol style="list-style-type: none"> 1. Purchasing intelligence and market research 2. Purchasing performance management 3. Supplier assessment, selection and quality 4. Risk management in purchasing 				

Quantitative Methods in Finance

Course level	MASTER				
Course code	196592				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	60	45	-	15	90
Teaching Staff	Miroslav Verbič (miroslav.verbic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<p>The students will obtain the knowledge and skills for modern quantitative analysis in finance. They will be able to apply this knowledge to the investigation of economic processes, and also understand the econometric and multivariate methods, approaches, ideas, results and conclusions met in the majority of economic and business books and articles. The students will understand essential differences between time series, cross-section data and panel data, and the specific econometric problems met when working with these types of data. The students should get the skills for construction and development of multiple regression models. The considered methods and models will be mastered practically on real economic data bases with modern econometric software. Key objectives and competences of the course are thus the following: - To expand the knowledge of basic econometric models used in applied economic analysis, where a formal treatment of the models is complemented with empirical applications. - To prepare the students to be able to use econometric methods and multivariate analysis for analysis at an advanced level.</p>				
Intended learning outcomes	<p>The student will learn advanced econometric techniques at graduate level and prepare for independent application of those techniques to various financial and economic problems.</p>				
Content <i>(Syllabus outline)</i>	<ol style="list-style-type: none"> 1. Introduction to quantitative methods in finance 2. Multiple regression model 3. Hypotheses testing 4. Model diagnostics in the multiple regression model 5. Regression models with dummy explanatory variables 6. Distributed-lag regression models 7. Instrumental variables estimation 8. Multivariate analysis 9. Time series modelling and forecasting 10. Discrete choice models 11. Panel data analysis 				

Research Methods and Techniques

Course level	MASTER				
Course code	196597				
ECTS credits	7				
	Lectures 60	Seminar 45	Tutorial -	Other type of learning 15	Individual work 90
Teaching Staff	Marko Pahor (marko.pahor@ef.uni-lj.si) Jože Rován (joze.rovan@ef.uni-lj.si)				
Prerequisites	Prior knowledge of undergraduate courses, such as Introductory Statistics and Statistical Analysis.				
Course objectives and competences	To prepare student for individual and group research work to support his or her informed decision-making process in practice.				
Intended learning outcomes	When finished with this course the student should be well-equipped with methodological and analytical knowledge to be applied in individual and group research work to support his/her informed decision-making process in practice.				
Content <i>(Syllabus outline)</i>	1. Introduction 2. Research ethics 3. Theory and practice of measurement 4. Desktop research vs. Field research 5. Survey research 6. Observation studies 7. Experimental research 8. Case study research 9. Introduction to sampling 10. Hypothesis testing 11. Regression analysis 12. Introduction to multivariate analysis 13. Interdependence statistical methods 14. Dependence statistical methods 15. Other analytical methods				

Risk Management in International Business

Course level	MASTER				
Course code	196658				
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Katja Zajc Kejžar (katja.zajc@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To develop students' ability to identify, assess and manage the risks that are inherent in international business transactions and to reinforce students' capacities of strategic analysis and application in an international context. Moreover, to develop students' general research ability and their practical skills needed for argumentation, discussion, presentation and negotiation.				
Intended learning outcomes	Students understand the specifics of international business and are able to identify the risks in international business and integrate them in ERM. Students master risk assessment and are capable of applying different methods and techniques of risk analysis by support of risk analysis software tools. Students master hedging techniques and are able to select the optimum mix of risk response strategies in given situation. Students are able to understand and critically evaluate the theory and its correspondence with the practices. They are sovereign in research and its argumentation, discussion, and presentation.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Establishing the context and defining risks in international business <ul style="list-style-type: none"> - Specifics of international business environment, formal & informal institutions - Development of the concept of country-specific risk and its components: <i>economic, financial, currency, political, social, environmental and cross-cultural risk</i> 2. The nature and measures of risk: <ul style="list-style-type: none"> - Expected return and standard deviation, mean-variance analysis - Value at Risk (VaR) and Maximum Probable Annual Loss (MPAL) - Diversification and risk - Capital asset pricing model, limitations of mean-variance framework and its alternatives (Arbitrage pricing models, Multi-factor models, Proxy models) 3. Economic and financial risk assessment <ul style="list-style-type: none"> - Variables and ratios for economic and financial risk assessment, macroeconomic analysis of income and balance of payment developments - Some warning benchmarks for risk management - Case studies 4. Political risk analysis <ul style="list-style-type: none"> - Methods and techniques: comparative, analytical, econometric techniques - Applications: measuring exposure to political risk in direct investment (macro and micro assessment, integration of risk estimates in the NPV concept) 5. Managing political, economic and financial risk <ul style="list-style-type: none"> - Covering commercial exposure: internal and external hedging techniques - Managing exposure of FDI: internal and external hedging techniques, political risk insurance - Risk response strategies - A case study on political risk management 6. Evaluating currency (foreign exchange) risk <ul style="list-style-type: none"> - Foreign exchange markets and exchange rate regimes - The international role and volatility of euro - Currency risk evaluation: transaction, economic and translation exposure 7. Managing exposure to currency and interest rates risks 				

- Internal techniques of exposure management
- Managing exposure to currency and interest rates risks by using financial derivatives (exposure to currency and interest rates risks, financial derivatives:, forward contracts, swaps, financial futures, currency options).

8. Risk management in practice

- Traditional versus integrated approach (ERM)
- Integrating political risk into ERM
- A case of ERM in a Slovenian subsidiary of MNC

Service Design and Innovations in Tourism

Course level	MASTER				
Course code	196646				
ECTS credits	7				
	Lectures 45	Seminar 30	Tutorial -	Other type of learning 15	Individual work 120
Teaching Staff	Ljubica Knežević Cvelbar (ljubica.knezevic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	This course provides an understanding about the nature of the touristic experience and helps participants to critically assess the relevance and applicability of new approaches to delivering meaningful tourism experiences. Having successfully completed this course, participants will demonstrate ability to: actively participate in service design; develop innovative customer-oriented products and services; ability to present excellent justifications for pricing, marketing and selling decisions; show excellent contribution to the work in project group.				
Intended learning outcomes	On successful completion of this course, the student will be able to: apply theories into practise in order to create innovative customer experiences; apply theme based product development and storytelling in designing tourism services; analyse market opportunities and develop services with a unique business potential; take quality, safety, sustainability and profitability perspectives into account when developing tourism services; plan way of pricing, marketing and selling for the tourism products and services.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Experience economy 2. Nature of touristic experience 3. Service Design as a foundation for innovation in tourism products 4. Tourism product development process 5. Co-creation in tourism 6. Theming and storytelling 7. Sustainable innovations 8. Quality, safety and security 9. Tourism product marketing and selling 10. Pricing tourism products 11. Creating total customer experience 				

Strategic Marketing Management

Course level	MASTER				
Course code	196613				
ECTS credits	7				
	Lectures 45	Seminar 30	Tutorial -	Other type of learning 15	Individual work 120
Teaching Staff	Tomaž Kolar (tomaz.kolar@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<p>Understanding importance and key concepts of strategic management of marketing function. Acknowledge the process approach to strategic marketing management and the key elements of marketing strategy and marketing plan tools. Acknowledge key tasks, strategic choices and challenges of marketing manager and the importance and tools for creative strategic thinking in marketing. Acknowledge novel trends and approaches relevant for marketing strategy development and key approaches for marketing organization and implementation and measurement of its results. Acknowledge the relationship of marketing with other business functions in delivering marketing programmes. In addition, students develop competences of integrated marketing project (real practice case) and its presentation Also: - to use domestic and international literature and other sources - of team work and reporting (oral, written) - of problem and solution definition and integral marketing implementation on firm level - understanding and analysis of complete integral marketing project and its presentation</p>				
Intended learning outcomes	<p>Systematic, holistic and analytical thinking about marketing problems. Knowledge about strategic and tactical marketing tasks and the capability for preparing briefings and instructions for conduct of particular step of marketing strategy. Capability to identify market opportunities and choose appropriate strategies for value positioning an the capability to structure and evaluate marketing strategy. Knowledge and judgment about the relevance of specific approaches, methods and tools for development of particular step of marketing strategy, knowledge and understanding of cooperation and interfaces of marketing with other business functions and knowledge about effective integration and implementation of marketing programmes.</p>				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Market-driven strategy 2. Analyzing Market opportunities and competitive space 3. Researching and Learning about customers and markets 4. Strategic Segmentation 5. Targeting and positioning 6. Customer relationship management 7. Strategic relationships 8. Value innovations and new product development 9. Brand Management 10. Pricing strategy and business models 11. Value-chain strategy and services processes 12. Communication strategy 13. Market-driven organization and planinng 14. Strategy implementation and control 				

Taxes and Tax Harmonisation in the EU

Course level	MASTER				
Course code	196835				
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Mitja Čok (mitja.cok@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	The main objective is to present the development of tax harmonization in the EU, both in the field of indirect and direct taxation. Further, to analyse the role of the ECJ in this harmonization process and to present the harmonization process in the social field.				
Intended learning outcomes	The student will acquire a solid understanding of the functioning of VAT, the corporate income tax and personal income tax and understand the related problems which appear in the international (particularly EU) context and how these problems are being tackled at the level of the EU. By studying some important cases of the ECJ, the student will gain knowledge of role of the ECJ in the harmonization process.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. VAT: Nasic features 2. VAT, directive 2006/112/EC (Recast VAT directive) and EU harmonization 3. VAT and cross-boundary flows 4. Corporate income tax: basic features 5. International taxation of capital income and EU harmonization; the role of ECJ 6. The European social model and harmonization in the social field. 				

Teams and Teamwork in Organizations

Course level	MASTER				
Course code	196612				
ECTS credits	7				
	Lectures 30	Seminar -	Tutorial -	Other type of learning 45	Individual work 135
Teaching Staff	Robert Kaše (robert.kase@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To familiarize participants with advanced concepts about work in groups and teams. To facilitate in-depth understanding of team processes and team development. To teach participants how to organize teams and how to be an effective team member and leader. To teach participants how to manage multi-team projects/systems.				
Intended learning outcomes	Applicability of teamwork for various tasks. Students will learn about the types of teams and how to organize them (e.g., select members, provide resources), how to build and develop a team. In addition, they will learn about the recognition of team characteristics and processes (e.g., cohesiveness, team affect, interpersonal perception, trust, conflict, influence). Students will also learn how are teams positioned within organizations and the characteristics of specific team types. Moreover, students will understand how team results emerge from interactions between members and how do the high performance teams differentiate from low performance teams.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Why teams? Task typology and interdependence 2. Team definition and team taxonomy 3. Team organization: Team composition and teamwork context 4. Team development and stages of team maturity 5. Team characteristics, processes and emerging states: cognitive, affective and behavioral aspects 6. Organizational and system embeddedness of contemporary teams 7. Management of multi-team systems 8. Featured teams: Virtual teams, Top management teams, New venture teams 9. Emergence and team outcomes (performance) 10. Characteristics of high performance teams 				

Tourism Economics

Course level	MASTER				
Course code	196262				
ECTS credits	7				
	Lectures 45	Seminar 30	Tutorial -	Other type of learning 15	Individual work 120
Teaching Staff	Tanja Mihalič (tanja.mihalic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To repeat and upgrade the knowledge on tourism gained in the undergraduate studies and to learn about the importance of tourism for the global, national and regional economy, and to learn about the functioning of tourism market and the economic function of tourism. To acquaint students with theoretical concepts and their critiques and to acquaint them with basic theoretical approaches for assessing the economic impacts of tourism. To train students to apply theoretical knowledge on practical cases.				
Intended learning outcomes	Students will get to know the basic literature from the field of economics of tourism and tourism policy. They will get to know and understand the connections between tourism and economic development, to know the factors of tourism demand and supply and the role of tourism market. Theoretically founded knowledge and relations will be applied to practical cases in the field of hotel industry, development and management of touristic destinations (towns, regions, countries). The usefulness of knowledge is also reflected through studies of practical cases and through cooperation with the private and public sector. With their own application of the gained knowledge and the method of transfer of good practices onto the selected fields, companies and agents, students will be able to reflect on their gained knowledge and experiences. During the implementation of the course the students will acquire, develop and strengthen specific skills: use of domestic as well as foreign literature especially articles, internet sources and the use of electronic library of World Tourism Organization; collecting data from traditional and electronic sources; assessment and interpretation of data; use of teaching tools, mostly electronic; use of different procedures and skills of public appearance as well as written and oral reporting and discussion; critical thinking and reporting; identifying and solving problems; project group participation, etc.				
Content (Syllabus outline)	1. Introduction (definitions, tourism development, trends) 2. Tourism economics (subject) 3. Tourism economy 3.1. Tourism demand 3.2. Tourism supply 3.3. Tourism market 4. Tourism consumption 5. Tourism economic impacts 5.1. Impact on balance of payment 5.2. Impact on regional development 5.3. Valorisation impact (impact on natural resources) 5.4. Impact on employment 5.5. Impact on inflation/deflation 5.6. Tourism multiplier 6. Tourism and economic development 7. Case studies				

Tourism Marketing

Course level	MASTER				
Course code	196263				
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Ljubica Knežević Cvelbar (ljubica.knezevic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Hospitality and tourism products and their consumers are significantly different from other goods and services. This course examines these variances and their implications to tourism marketing strategy and applications. The objectives of the course are to: examine the role of marketing within the strategic planning process in tourism organisation; teach students the applications and techniques of marketing strategy in tourism organisations.				
Intended learning outcomes	At the end of the course, students will be able to: clarify the characteristics of tourism products and consumers and the implications of these differences to marketing strategy; develop and implement market segmentation, target market and positioning strategies; develop and manage a tourism product portfolio; develop and implement and tourism revenue management plan; develop and implement a plan to create, monitor and manage service quality in tourism settings; develop and implement a customer relationship program.				
Content (Syllabus outline)	<p>1. Introduction to Marketing</p> <ul style="list-style-type: none"> - Definition of marketing - The marketing process - Historical perspectives <p>2. Services and Relationship Marketing</p> <ul style="list-style-type: none"> - Unique characteristics of service - Relationship Marketing - Experiential Marketing - Unique characteristics of tourisms <p>3. The Gaps Model of Service Quality</p> <ul style="list-style-type: none"> - The service value chain - Customer service expectations - Customer perceptions of service <p>4. Marketing Research</p> <ul style="list-style-type: none"> - Consumer research - Competitive research - Industry research - Environmental scanning <p>5. Market segmentation</p> <ul style="list-style-type: none"> - Market positioning - Market segmentation - Target market selection <p>6. Relationship Marketing</p> <ul style="list-style-type: none"> - Service failure and recovery - Firing the customers <p>7. Services Pricing</p> <ul style="list-style-type: none"> - Pricing models - Revenue managemt in tourism <p>8. The Financial and Economic Impact of Services</p> <ul style="list-style-type: none"> - ROI of services marketing 				

- Offensive and defensive marketing strategies
- Company performance measurement

Tourism Policy

Course level	MASTER				
Course code	196838				
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Tanja Mihalič (tanja.mihalic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Revise and upgrade knowledge in the field of tourism from undergraduate study level and get familiar with the concept and illustrations of tourism policy. Develop of format and instruments of the tourism policy and its power and develop capabilities for shaping and practical employment of the tourism policy instruments on the cases from practice, with respect of the limitations from broader environment and qualify students to use theoretical knowledge on practical examples.				
Intended learning outcomes	Students will get acquainted with the basic literature from the field of tourism policy. They will get to know and understand the connections between tourism and economic development, types of tourism policies, strategies, instruments for implementation and cases of good practice. Theoretically founded knowledge and relations will be applied to specific cases in practice from the field of tourism development and their economic impact and also from the field of use of touristic development strategies and instruments of tourism policy. The usefulness of knowledge is also reflected through fieldwork and through cooperation with tourist companies, government sector and other tourist entities. With their own application of the gained knowledge and the method of transfer of good practices onto the selected fields, companies and agents, students will be able to reflect on their gained knowledge and experiences. During the implementation of the course the students will acquire, develop and strengthen specific skills: use of domestic as well as foreign literature especially articles, internet sources and the use of electronic library of World Tourism Organization; collecting data from traditional and electronic sources; assessment and interpretation of data; use of teaching tools, mostly electronic; use of different procedures and skills of public appearance as well as written and oral reporting and discussion; critical thinking and reporting; identifying and solving problems; project group participation, etc.				
Content <i>(Syllabus outline)</i>	1. Introduction 2. Tourism policy 2.1. Definiton 2.2. Tourism development and tourism impacts 2.3. Reasons for tourism policy (<i>economic, cultural, social environmental, political</i>) 2.4. Different tourism policies (<i>employment, environmental policy, competitiveness, regional development; national, regional and destination tourism policies</i>) 2.5. Instruments 2.6. Case studies on tourism development and tourism policy 3. The role of the state 4. Tourism, globalisation, liberalisation and deregulation 5. The role of international, national and regional tourism organisations 6. Tourism and tourism policy in EU 7. Strategy of tourism development and instruments of tourism policy - Case studies on national and EU level				

MASTER COURSES in SPRING semester

Advanced Programming

Course level	MASTER				
Course code	196671				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	-	-	45	135
Teaching Staff	Talib Damij (talib.damij@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Students will learn with in-depth concepts of object-oriented programming, using a contemporary programming language Python.				
Intended learning outcomes	In addition to the syntax of the language used, students will write and test some useful programs to build business applications. In this course, students will deepen their knowledge of object-oriented programming concepts from theoretical and practical perspectives. In doing so, students will be able to successfully integrate their knowledge for developing business applications using Python programming language and GUI Tkinter.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Object-oriented programming 2. Programming language Python 3. GUI programming 4. Database access 5. Classes-objects 6. Applications Development 				

Artificial Intelligence

Course level	MASTER				
Course code	196561				
ECTS credits	7				
	Lectures 18	Seminar 12	Tutorial -	Other type of learning 45	Individual work 135
Teaching Staff	Kokol Bukošek Damjana (damjana.kokol.bukovsek@ef.uni-lj.si) Korenjak Černe Simona (Simona.Cerne@ef.uni-lj.si)				
Prerequisites	The enrollment in the study. Familiarity with basic knowledge of statistical and computer science approaches to data analysis is recommended. Basic knowledge of Python is needed.				
Course objectives and competences	Introduction of students to artificial intelligence with emphasis on modern approaches (deep learning and reinforcement learning). The course focuses on a practical part with concrete examples for the application of the presented approaches.				
Intended learning outcomes	The student will learn the major topics in artificial intelligence with its advantages and limitations. Emphasis is placed on modern approaches such as Deep Learning and Reinforcement Learning. The acquired knowledge will enable the student to understand how practical examples of artificial intelligence applications work.				
Content (Syllabus outline)	1. ARTIFICIAL INTELLIGENCE (AI) – INTRODUCTION 1.1 What is AI 1.2 History of AI 1.3 Risks and Benefits of AI 1.4 Some applications 2. LEARNING FROM EXAMPLES 3. DEEP LEARNING 3.1 Simple Feedforward Networks 3.2 Input encoding 3.3 Output layers and loss functions 3.4 Hidden layers 3.5 Learning algorithms 3.6 Generalization 3.7 Convolutional Neural Networks (CNN) 3.8 Recurrent Neural Networks (RNN) 4. INTELLIGENT AGENTS 5. REINFORCEMENT LEARNING 5.1 Learning from rewards (Markov decision process) 5.2 Passive reinforcement learning 5.3 Active reinforcement learning 5.4 Generalization 6. EXAMPLES: 6.1 Example of use of neural networks 6.2 Using regular convolutional neural networks for face and facial expression recognition with deep face – part 1 6.3 Using regular convolutional neural networks for face recognition and facial expression with deep face – part 2 6.4 Reinforcement Learning with Python (gym) – how to land lunar module on moon - part 1 6.5 Reinforcement Learning with Python (gym) - how to get mount car to the top of the hill – part 2				

Business Communication for Managers

Course level	MASTER				
Course code	196650				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	-	-	45	135
Teaching Staff	Jana Žnidaršič (jana.znidarsic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Getting familiar with the basics of polite behavior, including business rules, as well as protocol in day-to-day state events. Developing business communication skills, from writing with style to assertiveness in communication. Developing the basic skills concerning the effective meetings, negotiations and communication in tricky situation in general.				
Intended learning outcomes	Students get familiar with the fact, that good communication can help to open many doors, be it in business or private life. Students do understand that communication plays essential role in good business relationships and consequently in good business results. They do understand that the communication proces can be very challenging. Simultaneously, they get familiar with the fact, that patience and understanding are essential to creating an open and direct line to ensure achieving business goals successfully. They get necessary practical knowledge for effective business communication.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. The communication process 2. Persuasive communication: <i>Psychological and social elements of communication</i> 3. Communicating with coworkers (different tricky situations) 4. Persuasive communication using different assertiveness techniques 5. Cross-cultural communication 6. Business Etiquette 7. Business negotiations 8. Communication within group of co-workers 9. Effective presentations: <i>Public speaking and presentations</i> 				

Business Intelligence and Analytics

Course level	MASTER				
Course code	196603				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Jurij Jaklič (jurij.jaklic@ef.uni-lj.si)				
Prerequisites	Knowledge of principles of databases (relational data model, querying) and knowledge of spreadsheets basics.				
Course objectives and competences	To acquaint students with the methods and tools for business decision making. Business aspects and practical application are emphasized.				
Intended learning outcomes	Management of key concepts in the field of information technology as a support for business decision making, technological bases and tools. The topic is illustrated with various business cases. Students will be able to use various IT tools. Cases are discussed theoretically within the lectures and practical exercises. Preparation and presentation of the project work.				
Content <i>(Syllabus outline)</i>	<ol style="list-style-type: none"> 1. Analytical decision processes 2. Business intelligence applications 3. Technologies 4. Data architecture 5. Self-service business intelligence 6. Big data 7. BIS development 8. Multidimensional analytics / OLAP 9. Predictive analytics: Data mining 10. Business value of business intelligence 				

Business with Central Asia: Key Issues and Topics

Course level	MASTER				
Course code	196649				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	-	-	45	135
Teaching Staff	Gregor Pfajfar (gregor.pfajfar@ef.uni-lj.si)				
Prerequisites	Recommended knowledge/familiarity with: basic concepts and techniques from international business and marketing; basic analytical tools for analysis international markets, industries and companies; basic concepts related to culture studies and cross-cultural comparisons – cultural typologies: Hofstede, GLOBE, Hall etc.				
Course objectives and competences	Connect with a business partner from Central Asia (initial contact). Effectively communicate and negotiate with a partner from Central Asia. Search for information and conduct a PESTLE analysis for a selected market in Central Asia. Assess various types of risk in doing business in Central Asia. Identify business opportunities in a given Central Asian market. Conduct a market analysis for a selected product in a given Central Asian market.				
Intended learning outcomes	History basics of Central Asia and understanding the key economic characteristics of economies in Central Asia, their differences and similarities. Understanding the basic properties of business environments in Central Asia, their differences and similarities. Familiarity with the basic cultural characteristics of individual Central Asian countries, understanding their differences and similarities. Familiarity with the basic principles of business culture, etiquette, customs, business communication and negotiations with individual cultures of Central Asia. Understanding the fundamentals of marketing and consumer characteristics in Central Asia and individual markets. Understanding of the key issues and challenges in Central Asia and individual countries. Understanding the geo-political and geo-economic importance of Central Asia in the 21st century. Preparation of a business project for market entry into a selected market of Central Asia or business project with a business partner from Central Asia.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Course introduction – putting the »TANs« on the geo-economic and -political map in the 21st century 2. Short history of Central Asia 3. Overview of Central Asian economies: key economic indicators, competitiveness and key challenges 4. Business environments of Central Asian markets: similarities and differences 5. Central Asia and the world economy: foreign trade and FDIs 6. Cultural differences, similarities and specifics of Central-Asian countries and cross-cultural comparisons with western culture 7. Central Asia's business culture, etiquette and negotiations 8. Marketing and consumers in Central Asia 9. Sustainable development and key challenges 10. Project presentations 				

Corruption and Development

Course level	MASTER				
Course code	196630				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	-	-	45	135
Teaching Staff	Jože Damijan (joze.damijan@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<p>In the last decade corruption became an extremely important issue in development economics. Corruption is recognized as a major obstacle to the economic development as well as to making effective use of development aid in many undeveloped countries. Moreover, corruption is considered as a factor that negatively affects economic growth in developed countries. The course intends to examine the reasons for corruption occurrence and its social, political and economic consequences. The course has three objectives. First, to consider a theoretical framework, forms and consequences of corruption for economic development. Secondly, to study domestic and foreign corrupt cases in order to examine specific forms of corruption and the difficulty in identifying phenomena and in obtaining and analyzing data. And thirdly, to examine best practices in detecting and preventing corruption worldwide.</p>				
Intended learning outcomes	<p>To examine the reasons for corruption occurrence, corruption forms and its social, political and economic consequences, both on the basis of the analysis of economic theory and practical examples. The course will prepare students for work in the environment, where unethical and corrupt practices appear in daily business. It will enable the students to make ethical decisions, how to act when corrupt practices occur and how to prevent corruption. Moreover, it will give students the ability to understand theories and practical experiences of corruption. Lastly, it will allow for identification and problem solving, critical analysis, synthesis, writing articles, reflections on the read literature, team work and building of social skills.</p>				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Course overview, corruption in business sector 2. Costs of Corruption; Assessing vulnerabilities 3. Social, political, and economic effects of corruption 4. Culture and corruption (cultural differences in defining morality and decision making in business transactions) 5. Good governance and corruption prevention programs 6. Multinational business and anticorruption agreements 7. Integrity and leadership. 8. Case studies. Course wrap up. 				

Customer Relationship Management

Course level	MASTER				
Course code	196635				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	-	-	45	135
Teaching Staff	Tanja Dmitrović (tanja.dmitrovic@ef.uni-lj.si) Mojca Indihar Štemberger (mojca.stemberger@ef.uni-lj.si) Jurij Jaklič (jurij.jaklic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<p>Customer Relationship Management (CRM) is a contemporary business practice designed to put an enterprise into closer touch with its customers in order to learn more about them on an individual level and, on this basis, deliver greater value to each of them. It includes a set of approaches to understand the principles of acquisition, retention and growth of the value of consumer base, and influence customer behaviour via establishing meaningful communication with each customer. If implemented properly, CRM may become an invaluable source of sustainable competitive advantage, creating higher value for the customers, as well higher profits for the firm. Hence, CRM is much more than software or technology solution that helps track data and information about customers to enable better customer service. It is a business philosophy that has to permeate the entire organisation in order to produce results. In this course the students will understand customer-cantered marketing approaches. They will get acquainted with methods and technics related to different types of CRM (strategic, operational and analytical) which, together with information technology, enable generating marketing intelligence and lead to effective and efficient management of relationship with customers.</p>				
Intended learning outcomes	<p>Students will get to know theoretical foundations of CRM and learn to use some of the methods and software solutions used for CRM. They will acquire an insight into interactions of various business functions and divisions, especially between the sales, marketing and informatics divisions within a firm which are needed for successful CRM implementation.</p>				
Content <i>(Syllabus outline)</i>	<ol style="list-style-type: none"> 1. Evolution of relationship with customers 2. Identifying customers and interacting with them 3. Consumer journey and omnichannel management 4. CRM Metrics 5. Organisation for CRM 6. Customer value 7. Differentiation between customers 8. IT support to CRM 9. Methodology for CRM implementation 10. Business process modelling for CRM 11. Methods and tools for analytical CRM

Prerequisites	–				
Course objectives and competences	To understand the transition to a new form of business - e-business. To understand economic, technical, organizational and sociological aspects of changes in the transition to e-commerce. To understand key strategy and new business models in e-commerce.				
Intended learning outcomes	The course will enable students to: understand the opportunities which information technology is offering in e-business; understand the methods of e-business information system implementation; design new organizational structures and business processes in digital era; gain the ability to express their information needs and determining ways to meet them; develop the skills of gathering and use domestic and foreign literature and other sources, gathering and interpreting data, using of ICT and other teaching materials, using of different procedures, reporting (verbal and written), identifying and solving problems, performing critical analysis, synthesis, writing articles, reflecting on literature read, working in teams, etc.				
Content (Syllabus outline)	1. Running business in the information era 2. Business, technical, organizational and 3. Sociological issues of e-transformation 4. Information systems for e-business 5. Analysis and design 6. Implementation and security 7. E-strategy 8. Supply Chain Management, 9. Customer Relationship Management, 10. Product Lifecycle Management 11. New e-business models 12. Clusters, 13. Virtual organizations 14. E-payment systems 15. E-commerce UI design 17. Online retail 18. Business models in digital economy 19. M-business 20. IoT 21. Social networks, portals and auctions				

Digital Marketing

Course level	MASTER				
Course code	196359				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	-	-	45	135
Teaching Staff	Mateja Kos Koklič (mateja.kos@ef.uni-lj.si)				
Prerequisites	Knowledge of basic marketing content.				
Course objectives and competences	To develop thorough knowledge about digital marketing as a business concept and to develop skills to comprehensively combine digital marketing with other forms of marketing. To instill a sense of careful monitoring of the competitive environment of the company and positive orientation toward change in students. To accustom students to teamwork and to use the acquired knowledge to solve concrete problems.				
Intended learning outcomes	<ul style="list-style-type: none"> - Understanding the specifics of online micro-and macroenvironment. - Understanding the role of digital marketing in marketing management. - Understanding the similarities and differences between marketing in traditional and digital environments. - Understanding the changing role of consumers in digital environment. - Being able to apply new digital marketing methods and techniques. - Being able to analyze the situation, set goals, define strategies and choose tactics in the context of digital marketing. - Knowing about current digital marketing tactics and their potential for reaching marketing goals. 				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Online micro- and macro-environment analysis 2. Changing role of the consumer in digital environment 3. Strategic approach to digital marketing 4. Specifics of market research in digital marketing 5. Developing and managing digital presence 6. Content strategy 7. Digital media and marketing communication 8. Marketing communication activities in digital environment 9. Retailing in digital environment 10. Mobile marketing 11. Interaction with customers on social media 12. Social media marketing and other digital communication activities 13. Contemporary issues in digital marketing 				

Economic Policies of the EU

Course level	MASTER				
Course code	196586				
ECTS credits	7				
	Lectures 45	Seminar 45	Tutorial -	Other type of learning 30	Individual work 90
Teaching Staff	Mojmir Mrak (mojmir.mrak@ef.uni-lj.si) Vasja Rant (vasja.rant@ef.uni-lj.si)				
Prerequisites	Prior knowledge of microeconomics and macroeconomics is recommended.				
Course objectives and competences	<p>The main objective of the course is to broaden and deepen the understanding and knowledge of the students about those economic policies of the EU that have direct and indirect impact on activities of economic and other institutions on the internal market of the EU. Based on this course students will be able to understand the practical operation and theoretical logic of key EU economic policies and working of EU institutions. They will also be able to understand the division of responsibilities between the member states and the EU in determining the concept, implementation and monitoring the effects of EU economic policies.</p>				
Intended learning outcomes	<p>This course primarily addresses the economic aspect of European intergation. Its understanding, however, can not be complete, when not placed into the context of other aspects of european integration, including historical, legal, institutional and political. The course therefore assumes that students already have some basic knowledge of fundamental characteristics of the EU, its history and, particularly, its institutions. After a short look at historical, legal, institutional and political aspects of European integration, the first part of the course will focus on the presentation of theoretical economic logic of Eurpoean integration, both at microeconomic and macroeconomic levels, as well as practical aspects of the Single European market, its four freedoms and problems & limitations with respect to full implementation of these freedoms. In discussing EU economic policies, the course will start by presenting individual common EU policies which are designed and implemented predominantly or even exclusively on the EU level (trade, agricultural, monetary and competition policies). The remainder of the course will deal with selected EU economic policies, where the EU and its member states share competences (EU economic governance, cohesion and competitiveness policies, environmental, climate and energy policies). The course will also cover, particularly in the context of seminars, current challenges for EU economic policies. In this course, the students are expected to learn key characteristics of all major EU economic policies. This should help them in monitoring and analysing these policies, as well as formulating and implementing appropriate response strategies for different stakeholders. Knowledge gained through this course should encourage students to further study those economic policies which they encounter in their working careers and tasks and should also particularly improve their employability in those segments of the economy that deal with different aspects of EU economic policies.</p>				
Content (<i>Syllabus outline</i>)	1. EU fundamentals and institutions 1.1. Evolution of European integration 1.2. Economic fundamentals of the EU 1.2.1. Microeconomic fundamentals 1.2.2. Macroeconomic fundamentals 1.3. EU institutions and decision making 1.4. EU budget 2. EU single market 2.1. Evolution of the Single market 2.2. Four freedoms of the Single market 2.3. Removing physical barriers 2.4. Removing technical barriers				

2.5. Removing tax barriers

3. EU policies with exclusive/predominant EU competence

3.1. Monetary policy

3.2. Trade policy

3.3. Agricultural policy

3.4. Competition policy

4. EU policies with shared member states' and EU competences

4.1. EU economic governance

4.2. Cohesion (regional) policy

4.3. Competitiveness policy (Europe 2020)

4.4. Environmental and climate policy

4.5. Energy policy

4.1. Industrial policy

4.3. Transport policy

5. Current challenges for EU economic policies

5.1. Euro area challenges

5.2. Migration and security challenges

5.3. Political challenges

Environmental Economics in Tourism

Course level	MASTER				
Course code	196584				
ECTS credits	7				
	Lectures 30	Seminar -	Tutorial -	Other type of learning 45	Individual work 135
Teaching Staff	Tanja Mihalič (tanja.mihalic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<p>To introduce to students environmental issues in tourism and the basics of environmental policy in the field of tourism.</p> <p>To provide background knowledge for ecological (and economic) behavior of individual entities of tourism industry: both at national and the enterprise level of operation.</p> <p>To emphasize the economic dimension.</p>				
Intended learning outcomes	<p>Students will get acquainted with the basic literature from the field of ecology, tourism and management of environmental impacts. They will get to know and understand the connections between tourism and environment, and to know laws, theories and techniques of environmental management in tourism.</p> <p>Theoretically founded knowledge and relations will be applied to specific cases in practice from the field of hotel industry, tourism organization, and management of tourist destinations, national parks, etc. The usefulness of knowledge is also reflected through fieldwork or through connections with practice. With their own application of the gained knowledge and the method of transfer of good practices onto the selected fields, companies and agents, students will be able to reflect on their gained knowledge and experiences.</p> <p>During the implementation of the course the students will acquire, develop and strengthen specific skills: use of domestic as well as foreign literature especially articles, internet sources and the use of electronic library of World Tourism Organization; collecting data from traditional and electronic sources; assessment and interpretation of data; use of teaching tools, mostly electronic; use of different procedures and skills of public appearance as well as written and oral reporting and discussion; critical thinking and reporting; identifying and solving problems; project group participation, etc.</p>				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Introduction 2. Tourism 3. Tourism impacts <ol style="list-style-type: none"> 3.1. Impacts on economic environment 3.2. Impacts on natural environment 3.3. Impacts on cultural environment 3.4. Impacts on social environment 4. Environmental theories on the existence and prevention of environmental damage 5. Environmental policy in tourism 6. Instruments of environmental policy and their application to tourism <ol style="list-style-type: none"> 6.1. Administrative instruments 6.2. Fiscal instruments 6.3. Market instruments 7. Monitoring of environmental impacts and indicators 8. Applicability of environmental policy 9. Case studies 				

Financial Institutions Management 2

Course level	MASTER				
Course code	196593				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Marko Košak (marko.kosak@ef.uni-lj.si)				
Prerequisites	<p>Students are expected to master the following topics usually covered in banking/bank management/financial intermediation/financial institutions & markets courses: <i>basics of financial intermediation; characteristics of the key financial institutions; fundamentals of the key financial risks in financial institutions; fundamental knowledge on regulation of financial institutions and markets; elementary characteristics of the key financial markets – how they work and how they are interconnected.</i></p> <p>Additionally students are expected to master the following topics usually covered in corporate finance courses: <i>time value of money, valuation of financial assets, capital budgeting decisions, structure of capital and financial leverage.</i></p>				
Course objectives and competences	<p>Upgrading of the knowledge about financial institutions, as it was covered in other courses. Students are expected to become familiar with different types of risks important for financial intermediaries. The emphasis is on the risk aspects, that are more important from the point of view of financial intermediaries.</p>				
Intended learning outcomes	<p>Students learn about key financial and nonfinancial risks in financial institutions at the advanced level. They are familiar with risk management techniques and their applications in financial institutions. Students are able to do their own further research in the relevant literature, collect data and relevant information for successful application of learned skills and techniques.</p>				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Risks of financial intermediaries 2. Market risk - estimation of exposures and hedging <ol style="list-style-type: none"> 2.1. Different possibilities for market risk measurement 2.2. Var models for market risk measurement 2.3. Models that are not based on Var method 2.4. Hedging against market risk 3. Interest rate risk - estimation of exposures and hedging <ol style="list-style-type: none"> 3.1. Factors determining interest rate risk exposures 3.2. Hedging against interest rate risk 4. Foreign exchange risk - estimation of exposures and hedging <ol style="list-style-type: none"> 4.1. Significance of FX risk measurement and measurement models 4.2. Hedging against FX risk 5. Credit risk - estimation of exposures and hedging <ol style="list-style-type: none"> 5.1. Different models for credit risk measurement and their applications 5.2. Hedging against credit risk 6. Operational risk - estimation of exposures and hedging <ol style="list-style-type: none"> 6.1. Formation of data basis for operational risk management 6.2. Models for operational risk measurement 6.3. Management of operational risk 6.4. Hedging against operational risk 7. Stress testing and scenario analysis <ol style="list-style-type: none"> 7.1. Typology of stress tests and their applications 7.2. Design of stress tests and interpretations of the results 7.3. Generation of scenarios 8. Model risk 				

8.1. Potential dangers in the use of models

8.2. Risk management mistakes

Globalization and Multinational Firms

Course level	MASTER				
Course code	196626				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	-	-	45	135
Teaching Staff	Jože Damijan (joze.damijan@ef.uni-lj.si) Črt Kostevc (crt.kostevc@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To familiarize the students with the functioning of multinational firms, their specifics and their impact on competitors and host-country characteristics; comprehend the rigorous mathematical models of multinational firms in the context of trade models; analyze the role multinational firms play in the age of globalization.				
Intended learning outcomes	Students will get to know the primary differences in the way multinational firms function compared to local or national firms. The role of multinational firms will be explored through the ages and specifically during the latest globalization epoch. Knowledge of economic modeling of firm behavior and investment as well as trade will be upgraded and expanded allowing students to obtain tools for a detailed theoretical and empirical analysis of the way multinational firms function and how they impact their surroundings.				
Content (Syllabus outline)	1. Globalisation its manifestations and its consequences; 2. International trade and/or international production 3. Multinational firms 4. Evolution of the multinational firm 5. Theoretical models of multinational firms 6. Empirical research regarding the multinational firm and its impact on the business environment 7. Analysis of the operation of Slovene multinational firms				

Industrial Organisation, Competition Policy and Regulation

Course level	MASTER				
Course code	196608				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Nevenka Hrovatin (nevenka.hrovatin@ef.uni-lj.si) Sašo Polanec (saso.polanec@ef.uni-lj.si) Matej Švigelj (matej.svigelj@ef.uni-lj.si) Jelena Zorić (jelena.zoric@ef.uni-lj.si)				
Prerequisites	Knowledge of intermediate microeconomics.				
Course objectives and competences	Provide students with contemporary microeconomic tools of partial equilibrium and game theory to analyse market structure and its determinants. Gain understanding of the influence of market size, technological characteristics, competition between firms and government intervention on firm behaviour and market performance in different industries. Gain understanding of conflict of interest between competitive firms and social welfare. Understanding the importance of economic regulation. Understanding how economic regulation is connected to market liberalisation. Gain knowledge of different methods of economic regulation and understanding motives of different shareholders. Understanding the impact of regulation on prices and returns of regulated firms. Students become acquainted with the role of the EU regulatory agencies. Students get insights in the regulation process of European and Slovenian public utilities.				
Intended learning outcomes	Students will be acquainted with mathematical foundations for understanding market performance in different industries. With understanding strategic decision making students will be able to analyse different ways of competing in the market, market structures, market entry etc. Students will not only be able to understand different concepts of market structure, but also to formulate the problem and choose methods for describing and solving the position, including its verification. Students will be able to find solutions for practical examples and problems, where practical use of microeconomics and game theory in analysing strategic behaviour in different markets will be emphasised. Students will gain knowledge in theoretical and practical aspects of economic regulation. They will understand normative analysis of setting prices and practical experience of the most developed countries. They will be able to understand the role of regulation as a parallel process to market liberalisation of industries in the EU and Slovenia. Students will use acquired knowledge for examining economic regulation of public utility sectors (electricity, gas, telecommunications, water, transport) in the EU and Slovenia. Students will develop skills related to the use of domestic and foreign literature and other relevant sources, collecting and interpreting data, they will learn to use different methods, reporting (oral and written), problem identification and solving, they will develop the ability of critical analysis, techniques and skills related to report writing and reflection to the literature read.				
Content (Syllabus outline)	1. Basic Models of Market Structure 1.1 Monopoly and Extensions 1.2 Static Models of Competition 1.3 Product Differentiation and Competition 1.4 Dynamic Models of Competition 2. Entry, Exit, and Strategic Commitment 3. Asymmetric Information and Predatory Conduct 4. R&D, Patents, and Technology 5. Competition Policy in Practice 6. Types of economic regulation and theories of economic regulation 6.1 Rationale for economic regulation				

-
- 6.2 Price regulation: normative analysis of natural monopoly regulation – efficient prices
 - 6.3 Economic regulation in practice: rate of return regulation and incentive based regulation
 - 6.4 Regulation of quality
 - 7. Benchmarking in regulation**
 - 8. Economics of environmental regulation: instruments and cases**
 - 9. Liberalisation and regulation of markets in the EU**
 - 9.1 Common principles
 - 9.2 Regulation of selected industries

Integrated Marketing Communications

Course level	MASTER				
Course code	196401				
ECTS credits	7				
	Lectures 30	Seminar -	Tutorial 12	Other type of learning 33	Individual work 135
Teaching Staff	Vesna Žabkar (vesna.zabkar@ef.uni-lj.si)				
Prerequisites	Basic marketing course successfully passed (e.g., Principles of Marketing)				
Course objectives and competences	<ul style="list-style-type: none"> - Deepen the knowledge to integrate different forms of marketing communications in IMC. - Passing on knowledge for efficient and effective management and implementation of IMC. - Develop ability to formulate strategies, planning, implementation and evaluation of IMC strategies. 				
Intended learning outcomes	<p>Knowledge and understanding:</p> <p>Students acquire in-depth knowledge and understanding of concepts in the field of IMC, the analysis of IMC environment, strategic planning of IMC campaigns, design, development, implementation and evaluation of creative strategies, media strategies and assessing the performance of acquired skills in IMC: planning, implementation and evaluation of IMC strategies. In this context, they identify the target audience, set goals and prepare communication ideas and plans for their implementation, prepare media strategy and plan for assessing the efficacy / effectiveness of the implementation of IMC programs.</p> <p>Student is capable, based on an understanding of theory and experience in the preparation of the project, to critically evaluate consistency between the theoretical principles and practical conduct. Application of domestic and foreign literature, collecting and interpreting data, identifying and resolving problems of communication, analysis and synthesis, social skills, work in teams and reporting (oral and written) and in the use of ICT and other teaching materials.</p>				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Integrated marketing communications (IMC) in Business and Society 2. Analyzing the IMC Environment <ol style="list-style-type: none"> 2.1. IMC and Consumer Behavior 2.2. IMC Research 3. Strategic IMC planning (advertising, sales promotions, publicity, direct marketing, digital marketing) 4. Creative Strategy Planning 5. Creative Strategy Execution 6. Media Strategy with emphasis on digital media 7. Measuring IMC Effectiveness 8. Ethical and Regulatory Aspects of IMC 				

International Human Resource Management

Course level	MASTER				
Course code	196643				
ECTS credits	7				
	Lectures 30	Seminar -	Tutorial -	Other type of learning 45	Individual work 135
Teaching Staff	Robert Kaše (robert.kase@ef.uni-lj.si)				
Prerequisites	Candidates have passed basic Human Resource Management course.				
Course objectives and competences	The objective of the course is to make students aware of the people-related challenges arising from the internationalization of business, and teach them HRM strategies, policies and practices, which multinational companies (MNCs) pursue to effectively address these issues. Upon completion of the course the students will be able to: understand human resource management systems and their main challenges in multinational companies and improve their performance accordingly; efficiently implement specific IHRM activities in multinational companies; make better strategic decisions about people in international settings and design effective IHRM systems and practices for MNCs. The course also facilitates cross-cultural sensitivity, systemic thinking, context screening, and ethical behavior in international setting.				
Intended learning outcomes	IHRM concepts and categories Differences and moderators between HRM and IHRM The role and meaning of international assignees Components of IHRM system Characteristics of processes and activities for functional IHRM areas IHRM in various organizational context and modes of operation.				
Content (Syllabus outline)	1. IHRM and International Operations - Basic IHRM concepts - Differences between IHRM and HRM - The organizational context of IHRM - Staffing international operations 2. International Talent Management Cycle - Recruiting and selecting for international assignments - International training and development - Repatriation process and career issues 3. International Compensation and Performance Management - Components of an international compensation - Approaches to international compensation - Expatriate adjustment & performance - International assignee role conception & identification - Performance management - ROI of expatriate assignments 4. Strategic IHRM and Trends - Strategic view of IHRM - Global standardization vs. localization - Social capital and expatriate networks in MNCs - IHRM in cross-border alliances and SMEs - Ethical issues and trends in IHRM

	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	42	-	-	33	135
Teaching Staff	Polona Domadenik (polona.domadenik@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To develop an understanding of the importance of institutions on the functioning of the labor market from demand and supply side connection between the theoretical framework and the effective functioning of the labor market. To develop the ability to analyze problems and presenting solutions in the case of the labor market by using comparative methods. Show the importance of labor market performance. To understand and evaluate the performance of various economic policy measures.				
Intended learning outcomes	The student will gain in-depth knowledge of the institutions and the functioning of the labor market. Basic knowledge will upgrade with the knowledge of human capital theory, labor market regulation, discrimination and inequality. Based on knowledge of labor market institutions and regulation, the student will be able to connect theory with practice, both within companies and in government. In addition, students will also be trained in appropriate methodology for further research in the field of labor economics. Students will be able to compare the theoretical concepts of labor economics with the findings in practice and on the basis of this comparison to critically evaluate both the present theory as well as developments in practice.				
Content (<i>Syllabus outline</i>)	<ol style="list-style-type: none"> 1. Overview of the labour market 2. What do determine wages and earnings? <ol style="list-style-type: none"> 2.1. Demand side factors. 2.2. Supply side factors. 2.3. The impact of culture, history, law and public policy. 3. The role of education in labor markets 4. How much does education affect earnings and employment prospects? 5. What policies might increase educational attainment past high school? What policies might improve education attainment? 6. Discrimination in the labour market. What are the differences or “gaps” in labor market outcomes by race, gender and ethnicity? 7. Unemployment: who has the greatest chance of becoming unemployed? The short and long run impacts of unemployment on workers 8. Examining wage and income inequality: What do the data show? The role of education, skills and technology 9. Unions and labour market 				

Law of Business Finances

Course level	MASTER				
Course code	196394				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Branko Korže (branko.korze@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	The purpose of the course is to prepare students for practical application of the main debt and equity financing tools in the legal, regulatory and institutional framework for operation of companies, financial institutions and financial markets in the EU.				
Intended learning outcomes	TBD				
Content (Syllabus outline)	<p>1. Corporate governance and corporate finance</p> <p>1.1. Agents and principals</p> <p>1.2. Asymmetry of information</p> <p>1.3. Market-based and bank-based financial systems</p> <p>2. Governance in the capital company</p> <p>2.1. Joint stock and limited liability companies</p> <p>2.2. Marketing and Sales Across Cultures

Course level	MASTER				
Course code	196275				
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Irena Vida (irena.vida@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Mastering frameworks and tools for analysis of local, regional and global customers/stakeholders and the competence of applying these to marketing and sales. Gaining knowledge about concepts and frameworks related to communication effectiveness across cultures as they relate to interpersonal, marketing, management and organizational interactions. Developing communication competences for managing marketing and sales in the context of diverse stakeholder groups operating in the multi-cultural global environment. Comprehension of the various stages in the process of buying and selling in culturally, socially and economically diverse markets.				
Intended learning outcomes	Gaining an understanding of the effects of market integration on managing communications in marketing and sales along with comprehension of similarities and differences in individual and group responses to marketing stimuli in diverse social environments. New knowledge gained in the course relates to the insights into cross-cultural models and customer/stakeholder behavior in the dynamic global business environment as well as application of this knowledge to the practice of marketing and sales. Students will apply theoretical knowledge to practical examples (case studies, tutorials, in-class activities), and develop an in-depth analysis of a selected culture. In this course, students will gain an appreciation of the complexity of operating in the global marketplace and develop critical thinking ability and problem-solving skills through experiential learning. Moreover, they will develop critical and creative thinking skills free of bias and stereotypes for managerial decision-making in culturally diverse business environments. Students will learn to identify and utilize information and literature sources to further broaden understanding of diverse communication patterns, client/customer behavior and marketing/sales practices in dynamic global markets.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Globalization and Competences in Marketing & Sales across cultures <ul style="list-style-type: none"> - Culture, its meanings and effects 2. The role of Culture and other environmental factors in Communication <ul style="list-style-type: none"> - Cross-cultural competency framework. 3. Language, Culture and Communications <ul style="list-style-type: none"> - Implications for branding, advertising, negotiation and sales management. 4. Cultural values models and their implications for consumer and managerial behavior. 5. Social Responsibility and Ethics Across Cultures 6. The role of Contextual Intelligence Cultural intelligence in Marketing and Sales across cultures. 7. Culture and buyer behavior <ul style="list-style-type: none"> - The role of National identity - Consumer ethnocentrism - Animosity - Country-of-origin effects 8. Navigating Competing Forces of globalization & localization in the future 				

Marketing on Regional Markets

Course level	MASTER				
Course code	196607				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Maja Zalaznik (maja.zalaznik@ef.uni-lj.si) Gregor Pfajfar (gregor.pfajfar@ef.uni-lj.si)				
Prerequisites	Basic knowledge of marketing is recommended.				
Course objectives and competences	To develop marketing knowledge about market/regional diversity and to gain competence of understanding and developing market strategies. To gain competence and knowledge of cultural and other diversity of markets and their influence on marketing strategy development (entrance, m.mix etc.) on regional level, to develop competence of team work, presentation; to get competence of analysis, synthesis, problem solution and to develop critical thinking.				
Intended learning outcomes	To develop and gain marketing knowledge and understanding of market diversity and specifics of marketing (local, regional, global level). To understand the diversity of markets and their influence on strategy development, marketing mix on international and regional level and to understand cultural diversity, cultural and other environment influences on strategy design (local, regional, global level). Students are sovereign in research and its argumentation, discussion, and presentation.				
Content <i>(Syllabus outline)</i>	<ol style="list-style-type: none"> 1. International marketing environment: local, regional, global aspects 2. International, regional and local marketing research 3. Marketing mix and development of marketing strategies in regions: specifics of marketing in South-Eastern Europe, EU, Asian and American markets 4. Cultural specifics of marketing and cross cultural management in regional markets 5. Impact of technology and demographic trends on consumer behavior and markets across different regions 6. Negotiations and negotiations techniques: national and regional views 7. Challenges of regional marketing and its future development: integrations and coompetition 8. Course wrap-up and student group project reports 				

Neuroeconomics

Course level	MASTER				
Course code	TBD				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	-	-	45	135
Teaching Staff	Aljoša Valentincič (aljosa.valentincic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	The goal of the course is to introduce students to neuroeconomics and enable them to critically evaluate research in the field, as well as familiarise them with tools and experimental settings for research in neuroeconomics.				
Intended learning outcomes	Knowledge of the theoretical basis of neuroeconomics and current research in the field. Understanding of the development of neuroeconomics and the links between cognitive neuroscience, economic theory and decision-making processes. Understanding of the tools and methods of research in neuroeconomics. Understanding of ethical considerations in neuroeconomics.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Introduction & history of neuro-economics <ul style="list-style-type: none"> • Scope of the course, expectations • History of neuroeconomics 2. Rationality and economic theory <ul style="list-style-type: none"> • The classics • Neoclassics • Keynes • Friedman • Behavioral and experimental economics 3. Basics about the human brain and mind (cognitive neuroscience) <ul style="list-style-type: none"> • Anatomy of brain • Nervous system • Imaged brain • Cognitive processes (<i>vision, attention, memory, emotions, problem solving, decision making</i>) • Methods to study brain • Applications to economics 4. Risks, rewards and uncertainty 5. Decision making <ul style="list-style-type: none"> • Hormones • Genes • Emotions • Values and value-based decision making • Benefits and costs 6. Contemporary research in neuro economics <ul style="list-style-type: none"> • Marketing • Finance 7. Ethical issues 				

Public Finance 2

Course level	MASTER				
Course code	196591				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Mitja Čok (mitja.cok@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	The main objective is present public finance issues at a more advanced level. In particular, this means a rigorous presentation of the theory of optimal taxation and to present some theoretical features of the personal income tax, corporate income tax, VAT and the expenditure tax. Further, to present some theoretical features related to private insurance and social insurance. To present efficiency and equity issues in social protection systems. To present some theoretical foundations for the analysis of income redistribution. To present the new GFS methodology and its definitions of public finance categories.				
Intended learning outcomes	The student will acquire knowledge of some public finance topics at a more advanced level. This will involve not only pure theoretical knowledge of taxation, but also theoretical issues related to insurance and income redistribution. The student will also be well acquainted with the new GFS methodology, which is essential for the understanding of public finance statistics.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Theory of optimal taxation. 2. Taxes: personal income tax, value added tax, corporate income tax. 3. Social protection and social insurance. 4. Income redistribution. 5. General government revenues and expenses; public deficit and public debt. 				

Sales and Business Marketing Management

Course level	MASTER				
Course code	196636				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Barbara Čater (barbara.cater@ef.uni-lj.si) Irena Vida (irena.vida@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<p>To pass on in-depth knowledge on the specifics of marketing in markets where buyers are companies, government bodies and institutions and to introduce the role of personal selling in e-business. To develop an understanding of purchase behaviour of organizations. To present importance of relationships for marketing in business-to-business markets. To develop ability to plan marketing activities for business-to-business markets. To present a set of decisions a company should make when planning the sales function. To get students acquainted with methods for recruitment, training, motivation, compensation and evaluation of sales personnel and in this way advance general knowledge gained in Human Resource Management course. To make students aware of competencies needed by sales personnel and sales representatives to effectively complete sales calls. Develop the ability to integrate individual components of business-to-business marketing and sales management in a harmonious whole. To get competences: ability to analyse and synthesize; ability to work in group to conduct problem solving in the area of business-to-business marketing and sales management; ability to relate practical experience to topics discussed in class; ability to produce written reports; ability to present a group written project.</p>				
Intended learning outcomes	<p>After completing this course students are able to: describe specifics of marketing in business-to-business markets compared to consumer markets and the nature of buyer decision making; analyze business-to-business markets and execute appropriate segmentation; explain how relationships and networks are established and managed in business-to-business markets; analyze marketing problems of a chosen company and develop appropriate marketing strategy; explain recruitment, training, motivation and compensation of the sales personnel; define competencies of sales personnel and sales representatives to successfully complete sales calls as well as builds relationships with customers; understand of the meaning and diversity of sales personnel with regard to needed competencies and with regard to e-business; search for creative solutions in sales management, especially with regard to the desired behavior of sales personnel in the process of maintaining customer base for the long term.</p>				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Business marketing perspective and perspectives on the organizational buyer 2. Organizational buying behaviour 3. Segmenting the business market 4. Managing market offerings 5. Managing business marketing channels and supply chain management 6. Sales process 7. Gaining customers and the role of sales force 8. Customer relationship management strategies for business markets 9. Sales management: its nature and responsibilities 10. Sales organizational structure 11. Market and sales forecasting 12. Planning, staffing and training the sales team 13. Motivating salespeople and designing a compensation program 14. Evaluation of marketing and sales performance 				

Strategic Management 2

Course level	MASTER				
Course code	196606				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	45	-	30	90
Teaching Staff	Tomaž Čater (tomaz.cater@ef.uni-lj.si) Matej Lahovnik (matej.lahovnik@ef.uni-lj.si) Adriana Rejc Buhovac (adriana.rejc.buhovac@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To provide students with the knowledge about the relationship between strategic management and corporate governance, the theories about the sources of competitive advantage, the theory of growth strategies, the theory of retrenchment strategies, the role of environmental strategies and corporate social responsibility, selected topics on strategy implementation and strategic control, and the process of strategic management in non-profit organizations. To teach students how to use and critically evaluate the literature in the field of strategic management, link the acquired knowledge with current practical problems and enable them for further professional and research work in the field of strategic management. To help students actually understand the discussed theoretical concepts, methodological tools and practical examples, so that they can better implement them in practice and become, with some additional work experience, top experts in the field of strategic management.				
Intended learning outcomes	Students will have an in-depth knowledge on theoretical concepts and practical examples, related to strategic management. This knowledge will enable students to understand the discussed topics and use them in practice in an innovative way. Students will be able to compare theoretical concepts of strategic management with practical findings in the field and, based on this comparison, critically evaluate both theory and practice. Students will possess adequate methodological knowledge for further research in the field of strategic management. They will be able to use basic information technology and didactical equipment, critically collect and use domestic and foreign literature, collect, interpret and analyze data, which will enable them to solve actual problems, and provide reports on their work and proposed solutions.				
Content (Syllabus outline)	1. Introduction to strategic management 1.1. Strategic management process 1.2. The essence of strategy 1.3. Strategic management paradoxes 1.4. Strategic management schools 2. Corporate governance 2.1. Differences between governance and management 2.2. Principal-agent theory 2.3. Corporate governance systems 2.4. Ethics and values of owners and managers 3. Sources and forms of competitive advantage 3.1. Forms of competitive advantage 3.2. Theories on the sources of competitive advantage 4. Advanced topics on strategic analysis 5. Advanced topics on corporate strategies 5.1. Theory of the growth strategies (with an emphasis on diversification, mergers and acquisitions and strategic partnerships) 5.2. Theory of the retrenchment strategies 6. Advanced topics on business strategies 7. Environmental strategies and corporate social responsibility				

8. Advanced topics on strategy implementation and strategic control

- 8.1. Activities for improved strategy implementation
- 8.2. Traditional and contemporary performance measurement systems
- 8.3. Linking performance measurement to strategic goals
- 8.4. Linking compensation systems to performance measurement
- 8.5. Managing strategic change

9. Strategic management in non-profit organizations

Supply Chain Digitalization

Course level	MASTER				
Course code	196357				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Jure Erjavec (jure.erjavec@ef.uni-lj.si) Aleš Popovič (ales.popovic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	Understanding the importance of supply chain digitalization and the role of technology in supply chains. Understanding of business models and concepts based on the role of technology and information solutions and the understanding of business process management and business reference models in the field of supply chains. Moreover, understanding the role of measurement in supply chains, performance measurement indicators, supply chain performance measurement system and the challenges related to it. Understanding the role of business analytics in supply chains and the challenges firms are facing when implementing business analytics. The ability of introducing the digitization of supply chains and the introduction of new technologies in the supply chain. To be able to implement business process management in supply chains. To gain competences for identifying and using appropriate reference models in practice and the ability to use the acquired business knowledge and skills for designing and measuring supply chain performance and implementing the suitable measurement system and indicators. The ability to implement business analytics in supply chains. To gain competences for using contemporary IT solutions for managing supply chains				
Intended learning outcomes	Students will be able to understand contemporary concepts of supply chain digitalization. They will be able to follow the international literature on the subject. The course allows the students to understand concepts, trends and the role of IT in supply chains. In order to solve specific problems, the students are able to rely on international literature in this field. The course enables students to understand the theoretical and practical aspects of the subject, to critically reflect on problems in this area, and use practical solutions in solving problems.				
Content (Syllabus outline)	1. Digital transformation of supply chains 2. The role of technology in supply chains 3. Information systems in supply chains 4. Business performance measurement in supply chains 5. Business analytics in supply chains				

Supply Chain Management

Course level	MASTER				
Course code	196434				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Tanja Dmitrović (tanja.dmitrovic@ef.uni-lj.si) Aleš Groznik (ales.groznik@ef.uni-lj.si) Marko Jakšič (marko.jaksic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To familiarize the students with the role and importance of supply chain management in enhancing the competitiveness of the company. To understand the concepts needed to manage the supply chain and to understand the components, operation and management of enterprise marketing channels. To familiarize the student with the methods and techniques which enable learning about the needs of customers regarding services in the marketing channel and its ability to meet these needs. Understand the relationships between firms in the market the way.				
Intended learning outcomes	Understanding the concepts needed to manage the supply chain. Methods and techniques for planning, control, operation and management of supply chains. building on theoretical principles with analysis of practical examples of supply chain management practices. Examples from practice are discussed in combination of the theory based lectures and practical exercises. Seminar project focuses on problems from practice, where students work in groups to analyse the problem, which requires teamwork, collecting and analyzing literature, the Internet and related IT tools, and builds on the ability to write structured professional work.				
Content (Syllabus outline)	1. Introduction to supply chain management 2. Logistics network configuration 3. Inventory management and risk pooling 4. The value of information 5. Distribution strategies and e-fulfillment 6. Strategic alliances 7. International issues in supply chain management 8. Coordinated product and supply chain design 9. Customer value and supply chain management 10. Information technology for supply chain management 11. Decision support systems 12. Procurement strategies				

Sustainability and Quality in Supply Chains

Course level	MASTER				
Course code	196676				
ECTS credits	7				
	Lectures 42	Seminar -	Tutorial -	Other type of learning 33	Individual work 135
Teaching Staff	Marko Jakšič (marko.jaksic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	<p>Sustainability efforts present significant challenges and opportunities for business, governments, and communities. This course aims to provide students with an understanding of the challenges and opportunities facing supply chain nowadays.</p> <p>Specifically, the objectives of the course are to provide students with:</p> <ul style="list-style-type: none"> • Understanding of the concept of sustainability • Understanding of the sustainable development and supply chain operations • Awareness of the existing methods for evaluating supply chain's impact on sustainability • Understanding of the sustainability models in supply chain; • Understanding of the concept of quality in SCM; • Understanding of the concepts of Lean and Six sigma in quality management of sustainable supply chain. <p>The course topics cover triple bottom line in supply chain context, sustainability issues in purchasing, procurement, designing, producing, and logistics, ethical issues in SCM, and managing quality in SCM.</p>				
Intended learning outcomes	<p>Students will learn:</p> <ul style="list-style-type: none"> • How to use different techniques to reduce environmental impacts while reducing costs; • How to manage product development and design to reduce environmental footprint; • How to use different techniques to evaluate suppliers' sustainability; • How to manage transportation logistics to reduce warehousing needs within the firm; • How to do reverse logistics; • How to adopt sustainability strategies to fit shareholders' expectations; • How to manage quality for sustainability in supply chain. 				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Introduction to sustainable supply chain management – basic concepts 2. The triple bottom line in SCM 3. Sustainable supply chain (management) strategy 4. Ethics and corporate social responsibility in SCM 5. Sustainable purchasing and procurement 6. Designing and producing sustainable products 7. Sustainable transportation and warehousing 8. Reverse logistics and recycling 9. Supply chain quality and international quality standards 10. Managing quality in SCM – Lean and Six Sigma Management 11. Managing supplier quality in SSCM 				

Sustainable Finance

Course level	MASTER				
Course code	TBD				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	30	-	-	45	135
Teaching Staff	Marko Košak (marko.kosak@ef.uni-lj.si) Igor Lončarski (igor.loncarski@ef.uni-lj.si) Vasja Rant (vasja.rant@ef.uni-lj.si)				
Prerequisites	Students should demonstrate basic familiarity with concepts of financial intermediation, financial markets, financial instruments, and financial management.				
Course objectives and competences	<p>To learn about the basic functions of the financial intermediaries and how these basic functions evolve in light of increasing sustainability awareness.</p> <p>To learn about the basic functions of the financial markets and how these basic functions evolve with regard to environmental, social and governance considerations in finance.</p> <p>To learn about the factors that prompted the sustainability considerations to emerge and how the sustainability trends developed.</p> <p>To learn about the relationship and interaction between sustainable finance principles and traditional finance.</p> <p>To learn about sustainable business models in finance.</p> <p>To learn about the sustainability regulation of financial intermediaries and development of best industry sustainability practices and standards.</p> <p>To learn about the regulation of financial markets with relevance to sustainable finance.</p> <p>To learn about the strategy, the financial framework and the emerging regulation in the area of sustainable finance in the EU.</p>				
Intended learning outcomes	Students will understand the importance of sustainability and the role of finance. Students understand various approaches to measuring and reporting sustainability. Students demonstrate the ability to critically assess the traditional models in finance, the impact of sustainability on the future of finance, and strategic thinking regarding the transition from the traditional finance to sustainable finance.				
Content (Syllabus outline)	<ol style="list-style-type: none"> Definition and importance of sustainability Challenges of sustainability at the corporate level <ul style="list-style-type: none"> Internalizing externalities Governance Coalitions for sustainable finance Changes to business models Measuring and reporting Financing sustainability <ul style="list-style-type: none"> Investing for long-term value creation Equities Bonds Banking Insurance Sustainable investments and ESG ratings Sustainability disclosures (TCFD, EC, ...) Sustainable finance framework in the EU <ul style="list-style-type: none"> Planning sustainable finance in the EU (sustainable finance action plan, the European Green Deal and renewed sustainable finance strategy) EU financial response to sustainable finance challenges (budget, attracting private capital) 				

- EU regulatory response to sustainable finance challenges (EU sustainability disclosure standards, EU green bonds standards, EU taxonomy for sustainable activities, incorporating sustainability into prudential requirements)
7. **A transition from traditional to sustainable finance**
 8. **The interaction between sustainability and fintech**
 9. **Sustainability and the future of finance**

Topics (Issues) in International Trade and Globalisation

Course level	MASTER				
Course code	196590				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Jože Damijan (joze.damijan@ef.uni-lj.si) Črt Kostevc (crt.kostevc@ef.uni-lj.si) Katja Zajc Kejžar (katja.zajc@ef.uni-lj.si)				
Prerequisites	Participation to the course requires a basic background in: intermediate microeconomics, intermediate macroeconomics, international economics and econometrics.				
Course objectives and competences	To familiarize students with recent developments in the field of trade and policy, including the most recent contributions dealing with the topical issues of global economy. To provide students with contemporary tools for the analysis of the main issues concerning international trade in the age of globalization. To secure students' understanding of effects and causes behind complex global processes. To help build students' competencies to address the challenges that globalization raises for individuals, businesses, nations, and the world economy.				
Intended learning outcomes	- Knowledge of most recent concepts of globalization. - Understanding of benefits and potential negative effects of various forms of globalization. - Knowledge and understanding of analytical methods and approaches in estimating benefits and potential negative effects of various forms of globalization.				
Content (Syllabus outline)	1. Firm Heterogeneity and International Trade: trade liberalization and intra-industry reallocations, selection process, comparative advantages and heterogeneous firms 2. Exporters' Behaviour in global markets: export diversification, product-market mix dynamics, exporting and firm performance 3. Multinational firms, Integration vs. Outsourcing, and Incomplete Contracts: FDI and multinationals, firm organization and trade, contract enforcement and intellectual property rights protection 4. Global supply chains: changing patterns of global production, domestic value added of exports, development implications 5. Economic geography: location, production networks, spatial and urban economies, regional development 6. Gravity and Trade Costs: proper specification of gravity model, the intensive and extensive margins, border puzzle, information frictions in trade 7. Trade and Labour Market: migration and wage inequality, trade and income inequalities, costs of redistribution, labour market polarization 8. Trade, Growth and Institutions in global markets: trade and growth causalities, technology diffusion, trade and institutional change 9. Granularity, impact of firm-level hubs on the propagation of trade shocks and aggregate output fluctuations 10. Globalization and Trade Policy, Economic Integration Processes and New Global Economic Order				

Tourism Destination Management

Course level	MASTER				
Course code	196595				
ECTS credits	7				
	Lectures	Seminar	Tutorial	Other type of learning	Individual work
	45	30	-	15	120
Teaching Staff	Ljubica Knežević Cvelbar (ljubica.knezevic@ef.uni-lj.si)				
Prerequisites	–				
Course objectives and competences	To know: the importance of a holistic tourist offer that is formed in a tourist destination; the definitions and typology of tourist destinations; the subjects and factors active in tourist destinations; the methodology and design systems of tourist destinations; the organization and management of tourist destinations; the marketing of tourist destinations; know the monitoring of competitiveness of tourist destinations and the examples of tourist destination management.				
Intended learning outcomes	Students learn about the basic and specific concepts and definitions of touristic destination, literature, authors and practical cases of selected tourist destination management. They get to know the functions, subjects, the organization of tourist destinations, and the methodological approaches for analytical monitoring and planning of development and competitiveness of tourist destinations. The acquired knowledge enables the application of theoretical knowledge and practical cases in new environments, development of tools and methods for statistical monitoring of development and competitiveness of tourist destinations, an upgrade of knowledge for more effective management of tourist destinations and its benchmarking. The course develops a creative approach to development of skills in the area of tourist destinations management, an upgrade of the knowledge based on different types of tourist destinations, and empirical methods for monitoring the effectiveness of development and the competitiveness of tourist destinations. Within the course students develop skill to use different sources, literature and examples of good practices from Slovenia and mostly abroad; to use software for analysis; team work; to communicate with different entities operating in the tourist destination; to apply knowledge in practical situations.				
Content (Syllabus outline)	<ol style="list-style-type: none"> 1. Introduction 2. What is tourist destination? 3. Partnership of interest groups in tourist destination 4. The importance of tourist destination management: organization and business functions of tourist destination management 5. Positioning, USP and image of tourist destination 6. Marketing of tourist destination 7. Principles and methods of development of tourist destination 8. Measurement of competitiveness of tourist destination <ol style="list-style-type: none"> 8.1. Statistical sources for measurement of competitiveness of tourist destination 8.2. Indicators of development and competitiveness of tourist destination 8.3. A model for monitoring the lifetime of tourist destination 9. Basic instruments of tourism policy in tourist destination 10. Case studies 				

Transnational Management
